Lesson 1

An Independent Field

The highlights of the lesson

This lesson intends to discuss:

1. the definition of Early Childhood Education
2. the reasons for increase enrollment in early childhood program
3. why parents seek early educational experience for their children

Early childhood education is now a bona fide profession. It is fully developed/ recognized by the National Council for Accreditation of Teacher Education as a separate field , and distinguished from elementary or any other type of education . Now the field has clarity of purpose and a clear definition of self. Early childhood education is defined as "services for children from birth through age eight in partday and full-day group programs in centers, homes, institutions, kindergartens and primary schools, and recreational programs".

The first per- school institution was opened in 1816 by Robert Owen in Scotland. Later in 1837, Friedrich Frobel opened one in Germany, coining the term " kindergarten".

The field continues to grow. Participation in preschool education is increasing dramatically. In 1915 only 12 percent of children were in an early childhood program but in 1950, 21 percent of five-year-olds were in school. By 1965, 70 percent of five-year- olds attended kindergarten, but only 16 percent of four-year-olds and 5 percent of three-year-olds were in school. Today kindergarten attendance is

nearly universal and 65 percent of four-year-olds and 42 percent of three-year-olds attend school.

Enrollment in early childhood programs continue to increase as economic conditions dictate that both parents be employed outside of the home and more children live with single parents. Social forces have affected the field, the wide acceptance of early education as valid and beneficial for all children may be equally responsible for this growth. The importance of the preschool phase of early childhood education is now widely recognized throughout the nation. The American public is rapidly developing the belief that it cannot afford to delay entrance to school if the best interests of the society are to be served, crime and juvenile delinquency are to be kept in check, and children are to grow into adults who realize their potential. Today, parents recognize that early education benefits their children and their families. They seek early educational experiences for their children because they know their children will have the opportunity to:

- strengthen their emotional control,
- grow in physical health,
- develop self-discipline and control,
- foster self-confidence, self-understanding, and self-esteem,
- promote social skills, developing their ability to relate with both other children and Adults,
- be free to express themselves in art, music and literature.

1. COMPREHENSION EXERCISES

A. Choose the correct answer A, B, C or D.

1. National Council for Accreditation of Teacher Education formally approved early childhood education _____.

A. as a branch of elementary education
B. as a bona fide
C. as a distinguished and particular field
D. like any other type of formal education

2. The development of self-discipline and control in childhood could be due to_____.
   A. the educated parents
   B. the wealthy parents
   C. the healthy family
   D. the early educational experiences

3. The early childhood education_____.
   A. increases children's control
   B. lowers children's physical health
   C. promotes the ability of children to cope with other children and grown ups
   D. makes children free

4. According to the passage, who benefits from early childhood education?
   A. Parents and children B. Children
   C. Parents D. Teachers

B. According to the passage, which of the following statements are 'True' (T) and which are 'False' (F)? Insert 'T' or 'F', whichever is correct, in the boxes at the right.

1. After being recognized as a separate field, early childhood education stopped growing. ☐

2. Early childhood education includes all kinds of formal and informal educational group experiences dealing with children from birth through age eight. ☐

3. Economic conditions and social forces have had negative effects on the growth of the field. ☐

4. Early childhood education can be defined as a character-building experience. ☐

Selected Vocabulary

bona fide real; sincere(ly); genuine(ly), legal(ly)
Early childhood education is now a **bona fide** profession.

definition statement that gives the exact meaning of words or phrases
The field of early childhood education has clarity of purpose and clear **definition**.

foster help the growth or development of something
parents know that early childhood education will **foster** children's social skills.

juvenile young and immature person, teenager
Lack of education increases the amount of **Juvenile** delinquency in our society.

self-confidence trust in oneself and in one's abilities
Early educational experiences promote **self-confidence** in children by involving them in different activities.

self-esteem self-respect; good opinion of one's own character and worth
Parents recognize that early education experience will advance their children's **self-esteem.**

2. VOCABULARY EXERCISES

A. Match each word in Column A with a word or an explanation in Column B. There are more words in Column B than you need.

A	B
1. definition	A. grown up
2. adult	B. the power and skill to do something
3. ability	C. self respect
4. self-esteem	D. registration
5. enrollment	E. correct explanation
	F. chance for progress or advancement

B. Complete the following sentences , using the correct form of the following word.

enrollment, self-confidence, definition, institution, adult

1. A good kindergarten should foster_____ .
2. A fully grown person is called an_____ .
3. What is the _____ of early childhood education?
4. The first preschool _____was opened in 1816.
5. _____ in early childhood program has increased dramatically.

Lesson 2

Family, Members , Duties

The highlights of the lesson

This lesson is intended to discuss the institutional arrangement for preschool education which includes:

1. Nursery school
2. Day- care and family day-care center
3. Kindergarten
4. Primary grades

Early childhood education has a long history. Many individuals have contributed to the field, enabling the field to reach the status of a true profession and achieve maturity. Today's concept of early childhood education includes the nursery, day care center, kindergarten and primary years as a psychological entity requiring consistence in the child's development of concepts, relationship and positive attitudes toward himself and his achievements. This is essential preparation for the more organized school life to follow.

Nursery Schools. Today , nursery schools are usually for children from the ages two to five. They may be half day , full day, or two or three days a week. Some are sponsored by church groups, others by parents or civic organizations. The parent cooperative nursery school, uniquely American in origin, is popular . Parents work part-time in the cooperative school or contribute in some other way to defray the cost.

Day cares are designed to provide care for children whose parents work full- or part-time. Some programs offer 24-hour care for children whose parents work a night shift. There is a diversity of day care programs, with parents selecting a program suited to their needs. Whether the program is for profit or nonprofit or sponsored by local, state, federal government or parents, the focus is on care for the child and provision of educational, social, emotional, and physical growth.

Family day care is another form of care. Rather than a center Program, care is provided in a home, by a parent or other adult. Usually a limited number of children are permitted in a family day care program. This program, often more informal because it is in a home with a small number of children, may be well suited for children who find a large group situation difficult or for those with special needs.

Kindergartens are usually sponsored by a school system, and are designed for five year olds. However in some public school system three and four year olds are now attending pre - kindergarten programs. The kindergarten program may be a half or full day, and the focus is often on readiness. The goal is usually not to provide total care for the child or comprehensive services but to offer children the opportunities for academic intellectual, social, emotional, and physical growth through a well-rounded program of activities.

Primary Grades. Grades one, two, and three are for children between ages six and eight, and are usually a part of a public school or a private school system. The major goal is to teach children academic skills and provide social, emotional, and physical well-being. Children receive instruction in the arts, sciences, social sciences, health, and physical education.

1. COMPREHENSION EXERCISES

A. Choose the correct answer A, B, C or D

1. Early childhood education is essential because _____.
   A. it contributes to the field
   B. it includes nursery, kindergarten, day care and primary years
   C. it prepares children for more organized school life to follow
   D. it has a long history

2. Kindergartens are designed for _____.
   A .children between the ages of 2 and 5
   B. five years old children
   C. children under 5 years old
   D. children over 5 years old

3. The goal of kindergarten is to provide _____.
   A. total care for children
   B. comprehensive services
   C. different opportunities for children growth through a well rounded program of activities
   D. food and play

4. Why do some of the day care centers offer 24-hour care?
   A. because some parents work a night shift.
   B. because some parents work full-time.
   C. because some parents work part-time.
   D. because they can make more money by working 24 hours.

B. According to the passage, which of the following statements are 'True' (T) and which are 'False' (F)? Insert 'T' or 'F', whichever is correct, in the boxes at the right.

1. If well programmed, the different phases of early childhood education provide consistency in the child's development. ☐

2. In day care centers the focus is on academic education. ☐

3. Family day- care is a centered program providing children with instruction in arts and social sciences. ☐

4. The first three-year period of the public or private school system is considered as the last phase of early childhood education. ☐

Selected Vocabulary

emotional of or relating to strong feeling

The focus of early childhood program is on care for the child and provision of educational, social, **emotional**, and physical development.

growth development, maturation

The different phases of a comprehensive early childhood education provide consistency in the child's **growth**.

instruction direction; the act of teaching

Children receive instruction in the arts, sciences, social sciences, health, and physical education.

intellectual of or relating to intellect, as opposed to the emotions

The goal of kindergarten program is to offer children the opportunities for academic, **intellectual,** social, emotional, and physical growth.

kindergarten a class or school for young children, usually five-year- olds

The **kindergarten** program may be a half or full day and the focus is often on readiness.

psychological of or relating to psychology; mental

Parents have an outstanding role in children **psychological** development.

2. VOCABULARY EXERCISES

A. Match each word in Column A with a word or an explanation in Column B. There are more words in Column B than you need.

A.	B.
1. field	A. area
2. instruction	B. development
3. growth	C. arousing strong feeling
4. emotional	D. of or relating to intellect
	E. direction

B. Complete the following sentences, using the correct form of the following words.

instruction, public, emotional, field, family day care

1. Education promotes our psychological and _____ growth.
2. Children receive _____ in arts, sciences, social sciences, health, and physical education.
3. Many individuals have contributed to the _____ of early childhood education.
4. Primary grades are usually a part of a _____ or a private school.
5. _____ is often more informal because it is in a home with a small number of children.

Lesson 3

Nursery School As A Lively Workshop

The highlights of the lesson

This lesson intends to:

1. Picture the atmosphere and the activities going on in a nursery school.
2. Point out some of the objective standards that indicates the quality of a good nursery school.

It may be hard for some adults to imagine a "school" for children only 3 or 4 years old. "School" to these adults means a teacher in front of the classroom, the children seated at desks , books as the major tool for teaching , and the children hushed and quiet with no moving around. Obviously , this is not the style of 3 and 4 year- olds.

A nursery school group is more like a workshop than a lecture hall. The youngsters move around. They spend most of their time in small groups of two or three or four. They begin to learn to live, work, and play together. They learn to take turns , to settle disputes fairly and to cooperate. The nursery school program is also planned to let children use their bodies well. A good nursery school has both indoor and outdoor facilities and gives ample time for climbing, balancing, swinging, and other activities that build muscle coordination in preschoolers.

Nursery school children hear stories and music. They sing songs and take many educational trips. They are surrounded by informative and challenging pictures and exhibits . There is ample time for them to ask many questions of their teacher and of their friends . Their knowledge , their language, their awareness of the world around them is always growing.

The children also have the opportunity to express themselves through block play, sand play, art work of many kinds, and working with boxes, big blocks, tricycles, and climbing apparatus, wheelbarrows, and wagons. The children are almost constantly involved in make- believe play that give them the chance to use their initiative, to think, to plan, to develop their attention span , and build their capacity for problem solving.

Spend a morning visiting a nursery school before choosing it for your child. Your personal judgment- does it feel right to you for your youngster ? do you like the teacher?- is an excellent guide. A nursery school should not be a stuffy, hushed sitting place. Nursery school is a school for noisy, active 3 and 4- year- olds.

If the school welcomes your visit, that is a good sign. That can mean they like parents which is an indication of a good school. On your visit you can look into some objective standards at the same time; 1) The teacher should have college training in nursery or early childhood education; 2) The teacher should have an adult aide at all times, not necessarily highly trained, but a pleasing, sensible human; 3) Fifteen 3 or 4- year- olds should be the maximum class size for these two adults; 4) the indoor room should be clean and attractive, of course, but also large enough so the children have room to move around, and several different activities can go on at once; 5) There should be enough outdoor play space, fenced and well–equipped: 6) And something indoors or outdoors should catch your eye and excite you: an animal, an activity, etc. If you are lured to it, that can mean

your child's curiosity will also be stirred _ and that is what you want in a nursery school.

1.COMPREHENSION EXERCISES

A. Choose the correct answer A, B, C or D.

1. A nursery school group is like a _____.
   A. host family B. workshop
   C. educational trip D. lecture hall

2. Make-believe games give children the chance_____.
   A. to build their bodies
   B. to build their capacity of problem solving
   C. to make friends
   D. to climb and balance

3. Outdoor play space should _____
   A. be fenced and well equipped
   B. be as large as a park
   C. have modern equipment
   D. be covered with grass

B. According to the passage, which of the following statements are 'True' (T) and which are 'False' (F)? Insert 'T' or 'F', whichever is correct, in the boxes at the right.

1. Desks and books are considered as the major educational tools in preschool programs. ☐

2. It is important that a nursery school have indoor and outdoor equipment in order to help children use their minds and bodies. ☐

3. Through both doing art work and using carpentry tools, preschoolers express themselves. ☐

4. A nursery school teacher should be attractive and sensible but there is no need for her or his college training. ☐

Selected Vocabulary

cooperate work together for a shared purpose
The two schools are **cooperating** for the project.

coordination the way in which muscles work together when performing a movement
Climbing, balancing, swinging can build muscle **coordination** in preschoolers.

express show or make known; speak
Children **express** themselves through plays.

informative giving much information; instructive
Children are surrounded by **informative** and challenging pictures in nursery school environments.

initiative the ability to make decisions and take actions without asking for the help or advice of others
We should give children the chance to use their **initiative** and build their capacity for problem solving.

make-believe fantasize, to pretend that something is true
Imaginative or **make-believe** play is actually a very positive thing for young children- specially during the preschool years.

2.VOCABULARY EXERCISES

A. Match each word in Column A with a word or an explanation in Column B. There are more words in Column B than you need.

A	B
1. informative	A. a room in which a group of people work on a particular subject practically
2. cooperate	B. work together for a shared purpose
3. workshop	C. ability to make decision without asking for help
4. attention- span	D. instructive
5. initiative	E. the length of time a person can concentrate on some ideas or activities
	F. show or make known

B. Complete the following sentences , using the correct form of the following words.

make- believe, outdoor activity, lecture, training, preschoolers

1. The teachers should have college_____ in nursery or early childhood education.
2. _____ are children who attend nursery schools.
3. It is important that a nursery school have indoor and _____ in order to use their minds and bodies.
4. The children are almost constantly involved in _____ play that give them the opportunity to use the ability to make decisions and take actions without the help of others .
5. A nursery school is not a _____ hall rather it is like a workshop.

Lesson 4

From Exclusion into Full Participation

The highlights of the lesson

This lesson intends to highlight the following issues:

1. Children from a poor socioeconomically background are preconditioned for academic failure.
2. The slum home can not provide a child with the opportunity to grow.
3. The IQ units of slum children from birth to the age of seventeen (j.w. Getzels).
4. Hope for future.

All the evidence today indicates that children from a background that not only is economically and socially at the lowest level but also lacks family orientation toward formal learning are virtually excluded from success in school. They are preconditioned for failure. The school, attuned as it is to the middle- class majority, seldom helps such children catch up; it actually often widens the gap between success and failure.

Skills with words and comprehension of ideas that sprout from the thoughts behind words are probably the most essential prerequisites for formal learning. These are exactly the skills most lacking in the slum child. The slum home is a place of little opportunity for infants to talk, question and seek answers. In daytime, the most competent adults are out trying to make a living, and the children are either left to their older brothers and sisters or are parked with the least competent woman in the house. When the parents return

after the frustration of a day, the atmosphere hardly encourages much concern with child care. There is little patience with childish talk and questions. The passive child is considered the good child.

Recognition of the facts of deprivation and of the need of slum children or their equivalent in rural distressed areas has logically led to the preschool movement. The argument in favor of such education is virtually unanswerable; if deprivation starts to build up at an early age and progressively limits and eventually blocks entry into the mainstream of society, then an early start must be made to offset the lack of parental teaching, care and mind molding.

J. W. Getzels, Professor of Education at the University of Chicago, cited Doctor Bloom's findings and his estimate that the long-term over-all effect of living in a culturally deprived as against of culturally abundant environment is likely to be 20 IQ points. That in terms of a slum child's development, is organized as follows; from birth to four years of age, 10 IQ units, from four to eight years of age, 6 IQ units; from eight to seventeen, 4 IQ units.

The implications are obvious. The most serious harm, in terms of real or potential retardation, is already done by the time the slum child reaches what for the privileged child is the nursery school age.

This is, in basic terms the idea of preschool education for deprived children, and most of the today's experimentation has been based on this issue. Many Educators and politicians, who wish to end the frustration of deprived children, are trying their best to overcome this social inequality and lead slum children from exclusion into full participation in modern society.

1. COMPREHENSION EXERCISES

A. Choose the correct answer A , B , C or D.

1. Deprived children are preconditioned for _____ .

A. success B. failure
C. formal learning D. preschool learning

2. Schools do not usually help the _____children.

A. deprived B. middle-class
C. privileged D. upper-class

3. Parents' economic status has direct influences on the child's_____.

A. performance B. imitation
C. intelligence D. social skill

4. Most of the damage is done to the deprived child from _____.

A. seventeen to twenty years of age
B. four to eight years of age
C. eight to seventeen years of age
D. birth to four years of age

B. According to the passage, which of the following statements are 'True' (T) and which are 'False' (F)? Insert 'T' or 'F', whichever is correct, in the boxes at the right.

1. The slum home is a place of improvement and progress. ☐

2. Deprivation influences the child's mind-molding. ☐

3. If properly programmed. preschool activities can fight against the harmful attacks of deprivation on the development of children. ☐

4. Privileged children are virtually excluded from the rewards of modern society. ☐

Selected Vocabulary

competent sufficiently qualified; capable

There are a lot of **competent** adults working while their children are left alone at home.

failure lack of success; act of failing
School often widen the gap between success and **failure.**

offset compensate for; balance
Preschool education can **offset** the lack of parental teaching.

precondition accept without proof, consider as true
Poor children are **preconditioned** for failure.

privileged having special benefit; rich and powerful
Education should be available not only to the **privileged** but also to the deprived students.

retardation obstruction; slowing the progress or development
Deprivation can be a cause of mental **retardation.**

2. VOCABULARY EXERCISES

A. Match each word in Column A with a word or an explanation in Column B . There are more words in Column B than you need.

A	B
1. exclude	A. lack of success
2. failure	B. taking part
3. participation	C. the achievement of something desired
4. success	D. disappointment
5. frustration	E. encouragement
	F. keep out

B. Complete the following sentences , using the correct form of the following words.
prerequisite, exclusion, virtually, childish, mind modeling.

1. Preschool activities can lead children from _____ to participation in responsibilities.
2. Skills with words and comprehension of ideas are the most essential _____ for formal learning.
3. Deprivation influences the child's _____ .
4. There is little patience with _____ talk and questions in low income families.
5. The slum children are _____ excluded from the rewards of modern society.

@LOTUS_PNU

Lesson 5

Introduction

The highlights of the lesson

The following lesson intends to introduce some of the great educational thinker, their concerns, and their emphasizes on early childhood programs. The reader will become familiar with some of the influential figures in the field of early education such as:

1. Plato, 2) Sparta, 3) Pestalozzi, 4) Comenius, 5)Rousseau, 6) Jerome Bruner, 7) B.F. skinner, 8) Frederick Frobel, and 9) Mari Montessori.

Probably every great educational thinker in history has had something to say that has bearing, either directly or indirectly, on the field of early childhood education. Plato had a plan that would appeal to modern educators, and while his overall plan was greatly affected by the recent disastrous war with Sparta, Plato's reactions to this defeat were somewhat different from those of many Americans to the Russian launching of Sputnik. Perhaps that is chiefly because the threat was different.

Sparta won, not because the Spartans were better educated, but because they were tougher and better trained for war. Thus Plato would stress physical education in his program, teaching stories and songs to lay a foundation for heroism.

Comenius was concerned with phases of early childhood education as school experience as well as with the training of mothers.

Rousseau recognized childhood as a distinct and important period in the education of individuals. Pestalozzi was involved with the training of children at home. He was also concerned with the education of young children particularly, the socially disadvantaged. He did much of his teaching by providing concrete experiences. This was undergirded with an intense concern and love. One could show a relationship to the education of the very young from the work of many others, including the Swiss psychologist J. Piaget, whose concepts of stages of intellectual development are pertinent and influential in early childhood education.

Jerome Bruner places great emphasis on making education meaningful at all levels. It is Bruner who has done the most to gain acceptance of the fact that a wide range of academic subject matter is adaptable to kindergarten investigation. He contends - and we agree - that the important element of learning is the basic structure of the subject, that basic structure tends to be simple, and that it can be presented in some meaningful and intellectually honest way at any level.

The work of B.F. Skinner should be recognized as pertinent to early childhood education. Carl Bereiter, for example, in his model for teaching the disadvantaged child, makes use of the concepts of operant conditioning, concepts most closely identified with the work of Skinner.

Frederick Froebel is usually considered the "father" of kindergarten. In the early 1840s in Germany he established a school for young children, named it a kindergarten, and developed a program. That program laid great emphasis on educational "play" materials.

One regrets that Maria Montessori cannot honestly be called the "mother" of day-care center. The denial to her of this title certainly is not meant to reflect on her importance or on her teaching. Even before she became the director of what we would call a day-care center in Rome, she had accomplished much. She had the distinction of being the first woman physician in Italy.

A. Choose the correct answer A, B, C or D.

1. Plato stressed special education in his program in order to _____ .
   A. have a healthier generation
   B. win the war with Sparta
   C. lay a foundation for heroism
   D. appeal to modern educators

2. Comenius was mostly concerned with the_____ .
   A. education of the socially disadvantaged
   B. phases of early childhood education
   C. training of children at home
   D. stages of intellectual development

3. Who is considered as the father of kindergarten?
   A. skinner B. piaget
   C. froebel D. comenius

4. Montessori was considered as the _____ .
   A. founder of operant conditioning concept
   B. pertinent to early childhood education
   C. mother of day- care center
   D. first woman physician in Italy

B. According to the passage, which of the following statements are 'True' (T) and which are 'False' (F)? Insert 'T' or 'F', whichever is correct, in the boxes at the right.

1. Plato stressed on political education and did not believe in physical education. ☐

2. Comenius thought that the training of mothers was to be more important than school experience. ☐

3. Piaget's theories on stages of intellectual development are still considered relevant and influential. ☐

4. Bruner insisted on the basic structure of the subject as the important element of learning. ☐

Selected Vocabulary

bearing (on) relevant relation or interconnection
Every great educational thinker has had something to say which has a direct or indirect **bearing on** the field of early childhood education.

disadvantaged the quality of having inferior position
Preschool education can be very helpful for **disadvantaged** children.

educate train the mind and character
Children should be **educated** in using props effectively.

influential having influence
J. Piaget's concept of stages of intellectual development are very **influential** in early childhood education.

regret to feel sorry
We **regret** that Maria Montessori has never been called the " mother " of day care center.

undergird give fundamental support; strengthen or secure
I always try to **undergird** slum children by understanding their situation outside of the class.

2. VOCABULARY EXERCISES

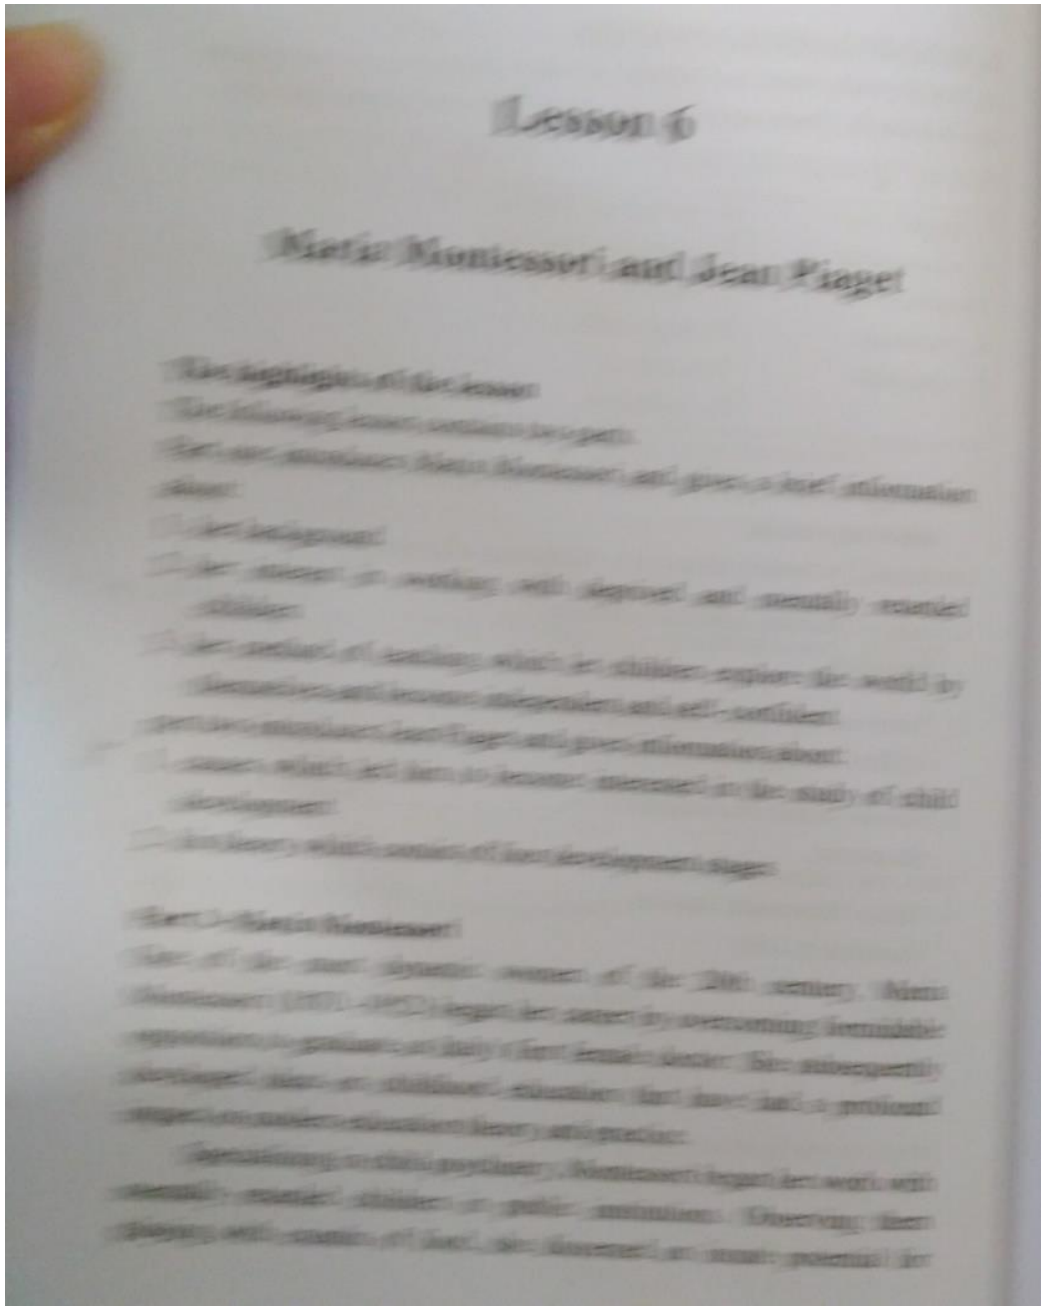

A. Match each word in Column A with a word or an explanation in Column B. There are more words in Column B than you need.

A.	B.
1. appeal (to)	A. to express, display
2. accomplish	B. relevant, attached
3. reflect	C. attract
4. pertinent	D. adjustable
5. adaptable	E. achieve
	F. inflexible

B. Complete the following sentences, using the correct form of the following words.

concerned, pertinent, distinction, influence, undergird

1. Lack of parental care has a harmful _____ on children's characters.
2. Plato was _____ about physical education in his early childhood program.
3. Skinner should be recognized as _____ to early childhood education.
4. Maria Montessori had the _____ of being the first lady physician in Italy.
5. They _____ their teaching with concern and love.

learning through sensory experience. Attempting to reach them, she developed equipment and techniques that within 2 - 7 years enabled them to pass public examinations in reading and writing alongside 'normal' children. Montessori's response to their success was "if mentally disabled children could be brought to the level of normal children then she wanted to study the potential of 'normal' children".

Her day-care center in Rome became known as the casa die Bambini (Children's House). The Children's House was a child care center in an apartment building in the poor neighborhood of Rome. She focused on teaching the students, ways to develop their own skills at a pace they set, which was a principle that Montessori called "spontaneous self-development".

Montessori Sensorial Materials are materials used in the Montessori classroom that help the child develop his or her 5 senses. The materials are designed to help the child refine tactile, visual, auditory, olfactory, and gustatory senses. This is the next level of difficulty after those of practical life. Sensorial Materials, like many other materials in the Montessori classroom, have what is called a "control of error". This means that the child will work with the material, but will have a way to check his/her own work rather than seeking out the teacher. This is done to help promote independence on the part of the child.

It has been reported that the Montessori Method of teaching has enabled children to learn to read and write much more quickly and with greater facility than has otherwise been possible. The Montessori Method of teaching concentrates on quality rather than quantity. The success of this school sparked the opening of many more, and a worldwide interest in Montessori's method of education.

Montessori's fame spread and she elaborated her ideas in a book, The Montessori Method. Her ideas, endorsed by the influential child psychologist and educator Jean Piaget, have become part of the mainstream educational thinking and her techniques of teaching and equipment are still used in many parts of the world.

Part 2 -Jean Piaget

Piaget was born in 1896 in the French-speaking part of Switzerland called Neuchâtel. Piaget was a precocious child who developed an interest in biology and the natural world. It was while he was helping to mark some of the intelligence tests that Piaget noticed that young children consistently gave wrong answers to certain questions. Piaget did not focus so much on the fact that the children's answers being wrong, but that young children consistently made identical mistakes that older children and adults did not. This led him to the theory that young children's cognitive processes are inherently different from those of adults. Ultimately, he was to propose a global theory of developmental stages stating that individuals exhibit certain distinctive common patterns of cognition in each period in their development. Jean Piaget defined himself as an epistemologist, interested in the process of the qualitative development of knowledge.

Piaget believed he could test epistemological questions by studying the development of thought and action in children. As a result, Piaget created a field known as genetic epistemology with its own methods and problems. He defined this field as the study of child development as a means of answering epistemological questions.

The four development stages are described in Piaget's theory as:

Sensorimotor stage: from birth to age 2. Children experience the world through movement and senses. During the sensorimotor stage children are extremely egocentric, meaning they cannot perceive the world from the view points of others.

Preoperational stage: from ages 2 to 7 (magical thinking predominates acquisition of motor skills). Egocentrism begins strongly and then weakens. During this stage children's thinking is based on intuition and still not completely logical. They cannot grasp more complex concept such as cause and effect, time, and comparison.

Concrete operational stage: from age 7 to 12 (children begin to think logically but are very concrete in their thinking). Children can

now conceive and think logically but only with practical aids. They are no longer egocentric.

Formal operational stage: from age 12 onwards (development of abstract reasoning). Children develop abstract thought and can easily think logically in their mind.

Piaget's influence is strongest in early education and moral education. His theory of cognitive development can be used as a tool in the early childhood classroom. According to Piaget, children developed best in a classroom with interaction.

In *Conversations with Jean Piaget,* he says: "Education, for most people, means trying to lead the child to resemble the typical adult of his society ... but for me and no one else, education means making creators ... You have to make inventors, innovators - not conformists".

1. COMPREHENSION EXERCISES

A. Choose the correct answer A, B, C or D.

1. Maria Montessori was _____.
   A. a specialist in childhood education
   B. a specialist in child psychiatry
   C. a pediatrician
   D. an opposition

2. Maria Montessori started her work with _____.
   A. disabled children
   B. slum children
   C. normal children
   D. 2-7 year old children

3. Montessori sensorial materials _____.
   A. can help teachers control the children
   B. can augment the five senses in children
   C. teach children to seek out the teacher
   D. can promote the child's dependence

4. When did Piaget discover that children consistently gave incorrect answers to certain questions?
   A. When he was a precocious child.
   B. When he expressed the theory of development.
   C. When he was marking some intelligence tests.
   D. When he showed his interest in the process of qualitative development of knowledge.

5. At which stage of development, described by Piaget, children can think logically in their mind?
   A. Preoperational stage
   B. Formal operational stage
   C. Sensorimotor stage
   D. Concrete operational stage

6. According to Piaget, education means _____.
   A. making a conformist
   B. making a man like other men of his/her history
   C. making someone who can create and innovate
   D. lead the child to learn something

B. According to the passage, which of the following statements are 'True' (T) and which are 'False' (F)? Insert 'T' or 'F', whichever is correct, in the boxes at the right.

1. According to Piaget, children from age 2 to 7 begin to think logically but are very concrete in their thinking. ☐

2. According to Piaget, classroom interaction has a great impact on child development. ☐

3. Piaget believes that education should lead the child to resemble the typical adult of his own time. ☐

4. According to Piaget, young children cognitive processes are the same as the cognitive processes of adult. ☐

5. Piaget, a child psychologist and educator, supported Montessori's idea. ☐

6. Modern educational theory and practice have had a deep impact on Montessori's idea on childhood education. ☐

7. Montessori Method of teaching emphasizes on quantity instead of quality. ☐

8. The Montessori Method is the name of the book which explains her theory in detail. ☐

Selected Vocabulary

acquire to gain or get something
The college **acquired** a reputation for a very high standard.

alignment a state of agreement or cooperation among persons, groups, nations, etc., with a common cause or viewpoint
The program must be in **alignment** with the children's age.

conformist thinking and behaving like others because you do not want to be different
Our children's creativity is being beaten down by the **conformist** educational system.

genetic epistemology the study of the origins (genesis) of knowledge (epistemology)

The goal of **genetic epistemology** is to link the validity of knowledge to the model of its construction.

innate of or produced by the mind rather than learned through experience
Children have an **innate** ability to learn languages.

innovator who introduces something new or makes changes in anything established.
An **innovator** is a creative person.

mentally retarded mentally less developed than is normal for one's age
She started her work with **mentally retarded** young people.

precocious having developed particular abilities at an earlier age than usual; showing this development
Their **precocious** daughter has already graduated from Harvard University.

profound having strong influence or effect; deep
The behavior of a mother has a **profound** impact on the developing child.

predominate to have control, power or influence over somebody or something
Fear of chaos and revolution still **predominated** among the middle class citizens.

2. VOCABULARY EXERCISES

A. Match each word in Column A with a word or an explanation in Column B. There are more words in Column B than you need.

A.	B.
1. inventor	A. self- centered
2. propose	B. very impressive or powerful
3. egocentric	C. energetic
4. genesis	D. something that causes a person to act in a certain way, do certain things
5. pace	E. a person who makes or thinks of new type of things
6. dynamic	F. focus
7.formidable	G. origin of something
8. disable	H. to offer something for consideration
9. motive	I. handicap
10. concentrate	J. potential
	k. quickness

B. Complete the following sentences, using the correct form of the following words.

interaction, mentally retarded, potential, perceive, independent, exhibit, dynamic, sensory experience, creative, cognition

1. He has a _____ approach for teaching science.
2. Teachers must _____ a sense of concern for children.
3. We should include _____ through different activities in our early childhood educational program.
4. If we teach children to check their own work, we will help them to become_____.

5. The children were so _____ that they have to be put in separate rooms for their afternoon naps.
6. Montessori began her work with _____ children.
7. we should not underestimate children's _____.
8. Individuals exhibit certain distinctive common patterns of _____ in each period in their development.
9. Children cannot _____ the world from view points of others during the sensorimotor stage.
10. Children learn and grow through_____.

@LOTUS_PNU

Lesson 7

Friedrich Froebel

The highlights of the lesson

In this lesson we will learn about:

1. Friedrich Froebel a German pedagogue, who developed the concept of 'kindergarten '.
2. his three main education philosophy.
3. his concept of children's learning through different activities.

Friedrich Froebel (April 21, 1782 – June 21, 1852), known as the originator of the kindergarten system, was a German pedagogue, a student of Pestalozzi who laid the foundation for modern education based on the recognition that children have unique needs and capabilities. He developed the concept of "kindergarten", and also coined the word now used in German and English.

By all accounts he had a difficult childhood. His mother died when he was a baby, and his father, a pastor, left him to his own devices. He grew up, it is said, with a love for nature and with a strong Christian faith and this was central to his thinking as an educationalist. He saw, and sought to encourage unity in all things.

He fashioned a personal philosophy of unity that embraced the spiritual potential within a person, the relations between people in a free society, the place of individual in relation to the nature that

surrounds and includes him, and the life force that controls growth in all things.

Thus, the three main ideas of Froebel's education philosophy include:

- Unity of creation
- Respect for the individual child
- The importance of play in children's education

Under the tutorship of Pestalozzi, Froebel observed that "children have extraordinary relatedness in exploring, observing and interacting with nature.

Friedrich Froebel's enduring significance was through his formulation of the "kindergarten system" with its emphasis on play and its use of 'gifts' (play materials) and 'occupations '(activities).

Friedrich Frobel's great insight was to recognize the importance of the activity of the child in learning. He introduced the concept of "free work" into pedagogy and established the game's educational worth. Activities in the first kindergarten included singing, dancing, gardening and self-directed play with the Froebel Gifts. He published a songbook to introduce the young child into the adult world.

His original concern was the teaching of young children through educational games in the family. He envisaged that the Gifts will teach the child to use his (or her) environment as

an educational aid; secondly, that they will give the child an indication of the connection between human life and life in nature; and finally that they will create a bond between the adult and the child who play with them. In the later years of his life this became linked to a demand for the provision of special centers for the care and development of children outside the home.

His interest in social learning and his emphasis on the 'unification 'of life became a foundation for a movement called Froebel Movement.

1. COMPREHENSION EXERCISES

A. Choose the correct answer A, B, C or D.

1. Friedrich Froebel is known as _____ .
   A. the organizer of preschool education
   B. the founder of kindergarten system
   C. Pestalozzi's teacher
   D. the father of preschool education

2. One of the ideas of Froebel's education is _____ .
   A. respect for individual adult
   B. love for nature
   C. the role of play in preschool education
   D. lack of creation of unity

3. According to the passage Froebel's initial concern was teaching children through _____ .
   A. German and English
   B. tutorship
   C. teacher- directed play
   D. educational games in the family

4. The word gifts in this passage means _____ .
   A. activities B. games
   C. occupations D. play material

B. According to the passage, which of the following statements are 'True' (T) and which are 'False' (F)? Insert 'T' or 'F', whichever is correct, in the boxes at the right.

1. Friedrich Froebel was the founder of modern education, recognizing children's needs and abilities. ☐

2. Froebel pictured that play material will teach a child to use his environment as an educational aid. ☐

3. Froebel believed that gifts give a sign of the relation between human life and life in nature to children. ☐

4. Recognition of the importance of activity of children in learning was Froebel's great perception. ☐

Selected Vocabulary

educationalist specialist in theory and methods of teaching
He grew up with a love for nature and with a strong Christian Faith, and this was central to his thinking as an **educationalist**.

embrace eager to accept an idea or opinion
We hope these regions **embrace** the new education law.

leave someone to his/her devices
let someone do what he/she wants without helping or controlling him/ her
His father, **left him to his own device**.

provision providing something that someone needs
The **provision** of childcare facilities is not the responsibility of the teacher.

self-directed responsible for organizing your own work rather than getting instruction from other people
Self-directed learners only need guidance and encouragement.

tutorship teaching pupils individually

Under the **tutorship** of Professor Brown he developed this technique.

2. VOCABULARY EXERCISES

A. Match each word in Column A with a word or an explanation in Column B. There are more words in Column B than you need.

A	B
1. pedagogue	A. someone who creates new things
2. originator	B. school teacher
3. tutorship	C. to inspire with hope or confidence
4. encourage	D. teaching pupils individually
5. insight	E. envisage
	F. the ability to perceive clearly or deeply

B. Complete the following sentences, using the correct form of the following words.

bond, endure, unique, movement, respect

1. Poor people _____ hardship in life.
2. The GIFT helped to strengthen the _____ between the child and his / her family.
3. We should _____ children as human beings.
4. Children have _____needs and capabilities.
5. Froebel's interest in social learning and his emphasis on the unification of life became a base for a _____.

Lesson 8

Jerome Bruner

The highlights of the lesson

This lesson intends to:

1. Introduce an American pioneer, Jerome Bruner who has made a profound contribution to the cognitive development of children in education.
2. Bruner's general learning process.
3. Bruner's three stages approach, enactive, iconic, and symbolic, which are based on the Jean Piaget's developmental psychology.

Jerome Bruner was born in U.S.A and his influence on teaching has been important. He was possibly the leading proponent of discovery approach in mathematical education although he was not the inventor of the concept (Romiszowski.,A.J.,1997).

Bruner believed that knowledge and learning were gained most effectively when children learned through personal discovery rather than being taught. He advocated that adults should assist the child to move from where they are to where they want to go.

Bruner's work in cognitive psychology led to an interest in the cognitive development of children and related issues of education, and in the 1960s he developed a theory of cognitive growth. Bruner's theories focus on the environmental and experiential factors influencing each individual's specific development pattern. His argument that human intellectual ability develops in stages from

infancy to adulthood through step-by-step progress in how the mind is used has influenced experimental psychologists and educators throughout the world.

According to Bruner the child finds some sort of match between what it is doing in the outside world and some models or templates that it has already grasped intellectually. For Bruner it is seldom something outside the learner that is discovered. Instead, the discovery involves an internal reorganisation of previously known ideas in order to establish a better fit between those ideas and regularities of an encounter to which the learner has had to accommodate.

His approach was characterised by three stages which he calls **enactive, iconic** and **symbolic** and are solidly based on the developmental psychology of Jean Piaget. The first, the enactive level, is where the child manipulates materials directly. Then he proceeds to the iconic level, where he deals with mental images of objects but does not manipulate them directly. At last he moves to the symbolic level, where he is strictly manipulating symbols and no longer mental images or objects. The optimum learning process should according to Bruner go through these stages.

Bruner's view that the student should become an active participant in the educational process has been widely accepted. In The Process of Education (1960) he asserts that, given the appropriate teaching method, every child can successfully study any subject at any stage of his or her intellectual development. Bruner's later work involves the study of the pre-speech developmental processes and linguistic communication skills in children.

1. COMPREHENSION EXERCISES

A. Choose the correct answer A, B, C or D.

1. Bruner believed that _____.
   A. grown ups should teach children to move
   B. children will learn more effectively through teacher's assistance
4. When did Piaget discover that children consistently gave incorrect answers to certain questions?
   A. When he was a precocious child.
   B. When he expressed the theory of development.
   C. When he was marking some intelligence tests.
   D. When he showed his interest in the process of qualitative development of knowledge.

5. At which stage of development, described by Piaget, children can think logically in their mind?
   A. Preoperational stage
   B. Formal operational stage
   C. Sensorimotor stage
   D. Concrete operational stage

6. According to Piaget, education means _____.
   A. making a conformist
   B. making a man like other men of his/her history
   C. making someone who can create and innovate
   D. lead the child to learn something

B. According to the passage, which of the following statements are 'True' (T) and which are 'False' (F)? Insert 'T' or 'F', whichever is correct, in the boxes at the right.

1. According to Piaget, children from age 2 to 7 begin to think logically but are very concrete in their thinking. ☐

2. According to Piaget, classroom interaction has a great impact on child development. ☐

3. Piaget believes that education should lead the child to resemble the typical adult of his own time. ☐

4. The study of pre-school developmental processes is one of the latest works of Bruner. ☐

Selected Vocabulary

advocate to speak or write in favor of; support or urge by argument; recommend publicly

Bruner **advocate** that adults should assist children to move to a desired level.

cognitive psychology the study of mental processes such as memory, reasoning, perception, learning and….

His work in **cognitive psychology** led to an interest in children cognitive development.

discovery the act or an instance of finding or learning about a place, an object, etc. for the first time; learning or finding out a piece of information

Researchers have recently made some important new **discoveries**.

template something that is used as a model for another thing

Her childhood became a **template** for how she brought up her own children.

stage level, a phase

There are numbers of different theories for describing the various **stages** of children development

2. VOCABULARY EXERCISES

A. Match each word in Column A with a word or an explanation in Column B. There are more words in Column B than you need.

A	B
1. approach	A. template, example
2. manner	B. help
3. assert	C. how something is done
4. model	D. move towards
5. assist	E. affirm, to state strongly
	F. carry on

B. Complete the following sentences, using the correct form of the following words.

assist, intuitive, manipulate, participant, grasp

1. She is ready to _____ any opportunity to expand her academic knowledge.
2. She has an _____ ability to see the capabilities of people.
3. Our teacher will _____ us with the project.
4. In iconic level Piaget deals with mental images of objects but does not _____ them directly.
5. Student should become an active _____ in the educational process.

Lesson 9

Joining the Profession

The highlights of the lesson

The lesson suggests that you think deeply about your knowledge, potential, and qualities that will help you to work effectively with children, their families, other adults and agencies, before joining the early childhood profession.

Being an early childhood educator is not an easy task. Before making the decision to become an early childhood educator, ask yourself these three questions:

1. Why do I want to work with young children?
2. What personal qualities and abilities do I possess that will make me successful in working with children?
3. What degree of involvement with children is best for me?

Become familiar with the nature of young children before entering the profession. Young children are messy. Their "I wanne's (I want to) "are only exceeded by their "I don't wannas (I don't want to) "and their needs are constant and immediate. If you envision yourself as an authority figure standing in front of a group of quiet, listening children, imparting knowledge and wisdom , then perhaps you might want to reconsider your decision. Preschool and primary children learn by doing , through their own activity, and your role is one of providing experiences for children, not lecturing.

Begin by observing children . Make it a habit, as you shop, ride the bus, or walk through your neighborhood , to observe children. Or volunteer to work in a day care center, baby sit, or get a job working in an afterschool program for primary children. Experience children for yourself, firsthand, and then make the decision if you really enjoy being with children.

Know the joys of working with children. Young children are fun to be with. They are inventive and full of expressive creativity. They're active and eager to find out more about the world in which they live (Hymes, 1983b). You will be able to laugh with them, and share some of the excitement of their young lives . As you work with children, you will actually see the difference you make in their lives. Others, perhaps those working in offices or behind the scenes, may never directly witness the effects of their work. You will observe daily the growth, learning and development of children.

Some elect to become teachers of young children because they don't want to work with adults. "Adults who work in careers involving young children will always experience some form of contact with the children's family". Working with children also means working with their parents. Parents work as volunteers in classrooms, and you will also have contact with parents as you join advisory boards, attend parent meetings and conferences with parents.

Then too, it is rare for today's teachers to work as isolates in their classrooms. More and more, teaching is a team activity . Be prepared not only to work with other adults in your classroom, but also with other staff members . As you work with children who have special needs you will be working with representatives of other agencies serving children and their families.

1. COMPREHENSION EXERCISES

A. Choose the correct answer A, B, C or D.

1. Before entering the profession, what should a teacher become familiar with?
   A. making a decision
   B. the nature of young children
   C. imparting wisdom and knowledge
   D. lecturing

2. Preschool children learn by_____.
   A. listening to their teachers
   B. playing with their teachers
   C. observation
   D. experimenting through their own activity

3. According to the passage , one of the differences between preschool teachers and those who work in offices is that _____
   A. a preschool teacher directly witnesses the effect of her work while an office worker doesn't
   B. it is easy for a preschool teacher to teach but it is not true for an office worker
   C. a preschool teacher sees different children but an office worker doesn't
   D. a preschool teacher never works with adults while an office worker always does

4. It is very common for today's teachers_____.
   A. to work in their classrooms, isolated from others
   B. to see themselves as authority figures and stand in front of quiet children
   C. to work with children's family and other staff members

2. There is a one-way love between the preschool teacher and the children in which the teacher is never a love receiver. ☐

3. In a preschool group communication should be considered more important than empathetic communication. ☐

4. In the preschool group children learn to understand their respective roles in society as adults. ☐

5. The more a child receives love in preschool, the less he understands the rules. ☐

6. The place of love in preschool is not the same as that of in school because the goals are different. ☐

Selected Vocabulary

apparatus set of instrument (equipment)used for doing something

Teachers is responsible to see that children have the required **apparatus.**

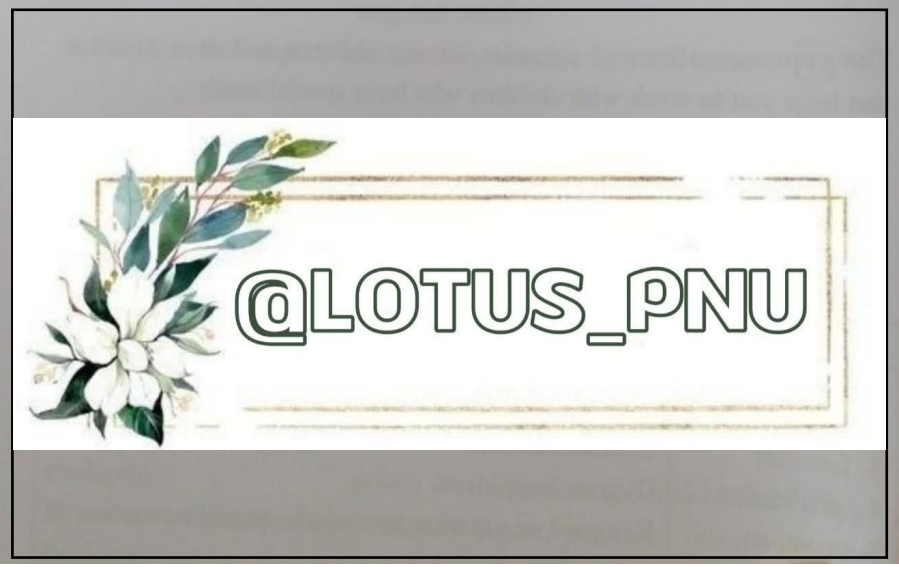

authenticity quality of being authentic; reliability; trustworthiness

One of the important task of a teacher is not to lose her/ his **authenticity** as a person.

credibility quality of being believable or generally accepted and trusted

Credibility is an important task which should be preserved by a teacher.

2. Teachers must realize the importance of their_____.
3. Preschool educators _____knowledge through love and activities.
4. Good teachers _____certain characteristics that make them different from ordinary teachers.
5. A good daily _____helps us to organize our work.

Lesson 10

The Role of a Preschool Teacher

The highlights of the lesson

This lesson of the book intends to share the following facts with the teachers and prospective teachers:

1. Through creating an a atmosphere of love and by using the apparatus available, they can help children to develop an understanding of the various roles they have and will have in the future.
2. They must enable children to communicate and express themselves empathically and verbally.
3. Through a relationship of respect, love, and agreement with children on rules and regulation, they lay a foundation for future learning while not losing their credibility and authenticities.

The teacher in a preschool group, like the mother at home, is the person responsible for creating an atmosphere of love. As she is, so will the preschool group be. The love that she radiates to those who participate in the school is reflected from person to person and back to her. When parents and students participate as assistant teachers, they – like the children –feel the teacher's love and, through their own love, increase its radiance. The empathy of the teacher with each person, and the empathy among persons is a measure of the love that permeates the preschool group.

The teacher must create a physical as well as social environment favorable to the development of children. Love must have a physical environment in which the children are safe, happy, and learning at an optimum rate. And love must be supplemented with an understanding of children and a curriculum suited to their needs.

It is the responsibility of the teacher to see that the children have the apparatus and activities required for well-rounded physical development. Three – and four- year- old children are just beginning to develop control of their large muscles; none must be neglected. The teacher also should help the children to develop an understanding of the

various roles they have and will have in the society –being a child now and an adult later, being a city dweller or a rural one, being a person, becoming a parent –and she should help them to understand, to appreciate, and to use the artifacts associated with these roles. She should encourage them to explore the physical environment in which they live. She should introduce them to quantitative as well as qualitative relationships.

The teacher must recognize the value of verbal as well as empathetic communication as she encourages the children to express themselves in words. She should introduce them to the wealth of children's literature and help them to dramatize their favorite stories. She should also encourage them to get acquainted with various art media and to express themselves through these media. She should provide them with a wealth of musical experience as an integral part of each day. As she plans and provides a well- balanced curriculum for the children, she must always be aware of the importance of helping them to relate to her and to each other in socially acceptable ways.

The teacher who creates an atmosphere of love in which the children develop socially, emotionally, physically, and intellectually, also creates an atmosphere favorable to the development of the parents

and prospective parents who observe or participate in the preschool group. As they experience the comfortable feeling of the children's group, they can become aware of the combination of love, democratic procedure, and educational technique which produces it.

The place of love in preschool differs from that of school because the function of preschool is different from that of school. Preschool goals are in terms of children developing each at his own pace; school goals are in terms of adult expectations for future citizens. Competent preschool teachers develop simple dialogue with each preschool child, using body and oral language, and valuing him as a person. Competent

school teachers, on the other hand, must go beyond these learning bridges which are an integral part of what is termed " love". A school teacher is expected to guide the learning of children in such a way that they develop defined skills, beliefs, and concepts. His/ her success as a school teacher is tied in with the successful learning of the children. She is apt under that circumstance to equate "love "with " a way of binding and controlling children, "and finds it difficult to "love "thirty or more pupils or students.

With genuine love it is possible for both school teacher and preschool teacher to accomplish one "major task of the teacher, " namely," not to lose her credibility and authenticity as a person. " With love the kindergarten teacher helps five-year-old children develop an understanding of what a rule is and an interest in setting up and following rules. Because "it is probable that what children seek from teachers and vice versa is a relationship of respect and agreement on rules by which both can plan the game of learning with zest and satisfaction." The preschool teacher, through love, lays a foundation on which the school teacher can subsequently guide children in learning what is expected of them as future citizens, and , at the same

time, retain her/his identity as a person. Love children and help them shine!

1. COMPREHENSION EXERCISES

A. Choose the correct answer A, B, C or D.

1. How can a preschool teacher help children to express themselves in words?
   A. by encouraging them to explore the physical environment in which they live
   B. by exposing them to a variety of children's literature and helping them to dramatize their favorite stories
   C. by planning a well-balanced curriculum for children
   D. by creating an atmosphere of love, in which children can develop

2. According to the passage, which of the following is not a responsibility of a preschool teacher?
   A. creating an atmosphere of love
   B. introducing children to quantitative as well as qualitative relationships
   C. helping children learn to play different musical instruments
   D. encouraging children to express themselves in words

3. Why is the teacher in the preschool group similar to the mother at home?
   A. because they both create safe physical environment
   B. because they both provide a well-balanced curriculum, suited to the children's needs
   C. because they both are responsible for creating an atmosphere of love

1. COMPREHENSION EXERCISES

A. Choose the correct answer A, B, C or D.

1. Friedrich Froebel is known as _____.
   A. the organizer of preschool education
   B. the founder of kindergarten system
   C. Pestalozzi's teacher
   D. the father of preschool education

2. One of the ideas of Froebel's education is _____.
   A. respect for individual adult
   B. love for nature
   C. the role of play in preschool education
   D. lack of creation of unity

3. According to the passage Froebel's initial concern was teaching children through _____.
   A. German and English
   B. tutorship
   C. teacher- directed play
   D. educational games in the family

4. The word gifts in this passage means _____.
   A. activities B. games
   C. occupations D. play material

B. According to the passage, which of the following statements are 'True' (T) and which are 'False' (F)? Insert 'T' or 'F', whichever is correct, in the boxes at the right.

1. Friedrich Froebel was the founder of modern education, recognizing children's needs and abilities. ☐

2. There is a one-way love between the preschool teacher and the children in which the teacher is never a love receiver. ☐

3. In a preschool group communication should be considered more important than empathetic communication. ☐

4. In the preschool group children learn to understand their respective roles in society as adults. ☐

5. The more a child receives love in preschool, the less he understands the rules. ☐

6. The place of love in preschool is not the same as that of in school because the goals are different. ☐

Selected Vocabulary

apparatus set of instrument (equipment)used for doing something

Teachers is responsible to see that children have the required **apparatus**.

authenticity quality of being authentic; reliability; trustworthiness

One of the important task of a teacher is not to lose her/ his **authenticity** as a person.

credibility quality of being believable or generally accepted and trusted

Credibility is an important task which should be preserved by a teacher.

curriculum all the courses of study offered by an educational institute

The teacher plans and provides a well- balanced **curriculum** for the children.

expectation a looking forward to; hope of gaining something

School goals are in terms of adult **expectations** for future citizens.

intellectually mentally; based on the power of mind to reason and understand

She has grown up physically but not **intellectually**.

quantitative of or concerned with quantity; based on size, number, weight or amount

Teachers should introduce both **quantitative** and qualitative relationship to the children.

radiate send out as if in rays; give forth of feeling of something

Throughout the hard time of doing the project, she was always **radiating** love and confidence to the whole team.

respect admiration; recognition

Children should show **respect** for their teachers.

zest great enjoyment or excitement; relish

Teachers must plan the game of teaching with **zest.**

2. VOCABULARY EXERCISES

A. Match each word in Column A with a word or an explanation in Column B. There are more words in Column B than you need.

A.	B.
1. encourage	A. search, examine carefully
2. neglect	B. real, honest
3. explore	C. give courage to
4. acquaint	D. needed for completeness
5. procedure	E. conduct
6. curriculum	F. individuality
7. genuine	G. qualification
8. guide	H. course of study
9. identity	I. pay no attention
10.integral	J. actions or series of actions to be completed in order to achieve something
	K. make aware of, make familiar with

B. Complete the following sentences, using the correct form of the following words.

expectation, guide, neglect, explore, encourage, appreciate, intellectually, procedure

1. My parents _____me to register in an English class.
2. All quality programs help children develop physically, emotionally and _____.
3. A teacher should help parents _____ how the preschool group enriches family life.
4. The Ministry of Education routinely updates policies and _____ to offer guidance to school leaders, educators, and parents.

5. He wanted to _____all the methods for solving the problem.
6. To a freshman, graduation is distant, but pleasant _____ .
7. It is essential that you not_____ your homework.
8. A school teacher is expected to _____ the learning of children in such a way that they develop defined skills, beliefs, and concepts.

@LOTUS_PNU

Lesson 11

Move Me to Move the World!

The highlights of the lesson

This lesson intends to state the importance of creativity in nursery school. It provide us with following suggestion:

1. Since most societies do not emphasis on rigid structure at nursery level, the teachers should feel free to provide opportunities for experiences that encourage the development of creativity.
2. The teacher should avoid telling, directing, and criticizing, instead he/ she should create creative environment, creative programs and creative self directed teaching.

The relationship between structure and creativity in the nursery school is important, though this importance may easily be missed. Primarily, the nursery school teacher structures her program in such a way that there are many opportunities for spontaneous expression by the children. The structures of society will have an influence but, fortunately, the majority of society is not yet concerned with establishing rigid structure at this level. This leaves the nursery school teacher relatively free to work within the framework of the nature, capabilities, and structure of the children in her group. Even though it is repetitious, it seems worthwhile to note that vast differences exist between the reactions of an individual child who is just attaining the age of three and the same child about to become five. Such differences

also exist in the reactions of individual children of the same age. The nursery school teacher seeks to provide opportunities for the kinds of experiences that encourage the development of creative expression suitable to his/ her particular children.

Throughout, it has been emphasized that the teacher is a vital element in the child's learning experience. This has been stressed because the teacher's role does not coincide with the popular concept of a teacher's work. To almost everyone , a teacher is someone who tells, demonstrates, or directs. On all levels, there is validity for this description. Most teachers do just that, and most adults were taught by such teachers. There are circumstances on any level when there is a need for directed learning. In the broader context, the concept implies that individuals learn chiefly by being "told" – but they seldom do. so The concept is especially misleading in all areas of early childhood education. The younger the child, the less effective is "telling" and the greater the need for self-directed learning.

The discussion applies with special force to the encouragement of creative activities. The teacher, on any level, who values imaginative thinking and expression must be especially careful not to criticize, or direct, or instruct in ways that inhibit. The teacher of young children plays a vital role in their creative experiences, but her part is not like that of the stereotype teacher. Other things being equal, the more creative the nursery school teacher is the more constructive the class becomes. An attitude of free adventure breeds such an attitude in children. The ability to see potential in a situation makes it possible for the teacher to plan for creative experiences. Some creative exercises by children demand a willingness on the part of the teacher to enter in the activities in ways that would be impossible for the less flexible adult.

The nursery school teacher does not have to excel in her creativity. The form of creativity he/she needs is more an appreciation of artistic endeavor, and an awareness of the possibilities in children, the situation, and the media. That is the teacher does not need to be a

gifted artist to be able to encourage children to express the feelings that music suggests to them. He/she is more in need of the freedom to plunge her hand into a container of paint than the ability to draw artistically. It is more important that he/she be a free, self confident human being, able to permit messiness at appropriate times and places while preventing it at other times that she understands the psychological implications of such artistic endeavors. It is helpful if he/she can play the piano and to catch with that instrument the melody the children are composing , but his/her playing need not to be flawlessly perfect.

Mellou, E(1996) suggests that young children creativity can be nurtured through educational setting in three respects: the creative environment, creative programs, creative teachers and teaching.

We should give children the opportunity to become creative, innovative, and equip them for their future lives as workers and citizens.

1. COMPREHENSION EXERCISES

A. Choose the correct answer A, B, C or D.

1. According to the passage the nursery school teacher _____.
   A. should structure her program in such a way that it encourages good relationship
   B. is relatively free to instruct in ways that inhibit
   C. establishes a rigid structure
   D. structures her program based on the needs of her particular children for the creative expression

2. A nursery school teacher should realize that _____.
   A. the older the child , the greater need for self-directed learning
   B. the younger the child, the more effective is "telling"
   C. the younger the child, the greater the need for self-directed learning and the less effective is "telling"
   D. the older the child, the less effective is telling and the greater the need for self-directed learning

3. Flexibility helps the nursery school teacher to _____.
   A. exercise
   B. plan for creative exercises
   C. demand creative exercises
   D. establish fixed structure

4. According to the passage the nursery school teacher does not need to be perfect in her creativity but needs to be able to _____.
   A. understand the psychological implications of artistic endeavor
   B. enjoy and appreciate artistic efforts
   C. play the piano perfectly
   D. search for self comfort

B. According to the passage, which of the following statements are 'True' (T) and which are 'False' (F)? Insert 'T' or 'F', whichever is correct, in the boxes at the right.

1. The nursery school teacher should never permit messiness, no matter how creative the experience. ☐

2. To structure an effective program, the nursery school teacher should consider the nature, capabilities, and structure of the children in her particular group. ☐

3. The nursery school teacher has to be flawless in her creativity. ☐

4. A creative child is more equipped for his/ her future life. ☐

B. Complete the following sentences, using the correct form of the following words.

concept, circumstances, coincide, endeavor, emphasize

1. The twins birthday_____ with their brother's graduation.
2. Does your teacher_____ on Math too?
3. She seemed unfamiliar with the _____that everyone should have an equal opportunity.
4. There are_____ on any level when there is a need for direct learning.
5. A teacher must be able to appreciate artistic_____.

Selected Vocabulary

awareness consciousness; perception; realization

A teacher should have an **awareness** of the children's potentials.

coincide be identical or very similar to something else; agree

A teacher's role does not **coincides** with the popular concept of a teacher's work.

creativity ability to create; capacity or power to do or make new things

Children **creativity** can be nurtured through educational setting.

emphasize place special stress or insistence upon something; stress

It has been **emphasized** that the teacher is a vital element in the child's learning experience.

inhibit prevent somebody from doing something; prevent a process or an action

Shyness **inhibited** the child from speaking.

2. VOCABULARY EXERCISES

A. Match each word in Column A with a word or an explanation in Column B. There are more words in Column B than you need.

A.	B.
1. endeavor	A. a basic structure
2. rigid	B. imperfection
3. framework	C. most important or necessary quality of something
4.circumstance	D. a condition that affect a situation
5. essence	E. attempt, effort
	F. not easily changed

Lesson 12

Cross the Bridge. You've Come to It!

The highlights of the lesson

In order to cross the bridge and become an effective teacher you should:

1. work with children as well as adults who share the same interest.
2. realize the importance of your role in promoting professional development of the colleagues.
3. help the community to understand the role of the preschool group in enriching family life.
4. realize that the well-being of children is more important than your loyalty to any type of administrative organization.

The effective preschool teacher enjoys working with adults as well as preschool children. She/he should have such interest in guiding the learning of young children that her/his enthusiasm attracts and holds others who share her/his interest—parents, grandparents, and other volunteers; teenage students; and aides serving as teacher assistants. As she works with them and with the preschool children, the teacher expresses appreciation of their helpfulness, observes what each does and does not do in guiding the children, interprets their behavior as feedback on what is needed to learn for making constructive suggestions about how to provide learning activities for the children. The teacher furthers his/her awareness of how preschool children learn and of what changes in the social and physical environment of a

child contribute to changes in the children's behavior. She encourages colleagues and assistants in exploring alternative procedures and observing, resulting changes in the development of children. She helps them in obtaining feedback as they guide learning, and in planning more effective means for accomplishing, their objectives. In short, the preschool teacher is sensitive to her role in augmenting the professional development of her colleagues and assistants.

Realizing the importance of a preschool group experience, the teacher should help other members of the community to appreciate how the preschool group strengthens and enriches family life. The teacher who is aware of the various types of preschool groups can advise families who are looking for the group especially suited for their family.

Through membership in such professional organizations as the National Association for Education of Young Children and the Association for Childhood Education International, the teacher has the opportunity to work with others who are interested in preschool children. She must put aside her vested interests in the particular type of preschool education with which she is associated—private nursery school, children's center, parent cooperative play group, or school-sponsored preschool group. The well being of preschool children in general is more important than loyalty to any type of administrative organization—no matter how significant they are in the history and development of preschool groups. The teacher should be primarily concerned that preschool groups be planned in terms of children of preschool age, and in terms of families as they are today. With this wider purpose, she should strive to help people to understand the desirability of a full, rich life for young children and the importance of a preschool group experience in love and democracy as a bridge between home and the traditional school.

1. COMPREHENSION EXERCISES

A. Choose the correct answer A, B, C or D.

1. An effective preschool teacher encourages his or her colleagues in _____.
   A. training parents, teen-age students and assistants
   B. changing the result
   C. increasing children's awareness
   D. planning effective means for achieving their goals and objectives

2. Some changes in the social and physical environment of children contribute to changes in their _____.
   A. membership in professional organization
   B. behavior
   C. unintentional suggestion
   D. constructive suggestions

3. An effective preschool teacher is primarily concerned that preschool groups be planned in terms of _____.
   A. elementary school age children and their families
   B. preschool age and in terms of families
   C. administrative organizations and families as they are today
   D. children of any age and in terms of families as they are today

4. An effective preschool teacher_____.
   A. hates having parents in her class
   B. should avoid showing enthusiasm
   C. involves any kind of volunteers, aides and colleagues in exploring and observing the mystery of preschool education
   D. should merely obey the administrative organization

B. According to the passage, which of the following statements are 'True' (T) and which are 'False' (F)? Insert 'T' or 'F', whichever is correct, in the boxes at the right.

1. While working with parents and preschool children, the teacher helps the parents to know the needs and abilities of the children. ☐

2. Preschool education is a bridge between home and the traditional school. ☐

3. The presence of adults in a preschool group stops the regular and planned procedures of the educational program. ☐

4. The preschool teacher should have no concern about her colleagues' professional development. ☐

Selected Vocabulary

colleague fellow worker; an associate in a profession or business
A teacher should share her knowledge with her **colleagues**.

constructive having a useful purpose; helpful to develop, improve or reinforce something
Constructive suggestion of educators advances the quality of education .

effective producing the intended result; impressive
An **effective** preschool teacher enjoys working with parents.

enrich make rich or richer; improve
A teacher who is aware of the various types of preschool groups **enriches** family life.

enthusiasm strong feeling of admiration, interest; great eagerness

A preschool teacher's **enthusiasm** attracts others who have the same interests.

2. VOCABULARY EXERCISES

A. Match each word in Column A with a word or an explanation in Column B. There are more words in Column B than you need.

A.	B.
1. feedback	A. one who enters into or offers himself for any service of his free will
2. volunteer	B. recommend
3. behavior	C. intention
4. observe	D. press with force
5. advise	E. an answer to an action or process passed back to the person in charge
6. purpose	F. watch carefully
	G. the manner in which a person conducts himself

B. Complete the following sentences, using the correct form of the following words.

volunteer, attract, behavior, observe, encourage

1. Animals_____ the attention of hundreds of children in the zoo.
2. Don't_____ bad habits in a child.
3. Punishment does not always change a child's_____.
4. Many mothers like to do _____ work in kindergarten.
5. We should _____ what each volunteer does and does not do in guiding children.

Lesson 13

Two Heads are Better than One!

The highlights of the lesson

The intention of this lesson is to remind us that no teacher alone is able to do everything for every child, so a preschool teacher must:

1. try to get the parents help by creating a mutual understanding and assistance.
2. try to forget his/ her unpleasant background and see the help of superiors, experts, and any other persons that one can think of.
3. try to be an example in willingness to work with others and teach cooperation in action.

It is basic to the philosophy of the text that all children are important. If children are important, then early childhood education is the most important field in all of education. Children on this level deserve the best. Teachers need the best materials in order to teach effectively. All the special services of school and community should be available to the young child. Money should be available for the relatively inexpensive supplies. The equivalent of the price of textbooks on the upper levels would go far toward adequately equipping the early grades of school.

This is true for all persons; it is the weak man who must claim to be strong in every way. No teacher, alone, is able to do everything for every child. She needs all the resources of school and the community. She certainly needs the cooperation of parents. Too often school

even while she is learning the present situation. The teacher keeps alert. If she does and keeps looking, there is almost always some way of finding help for any child's problem.

1. COMPREHENSION EXERCISES

A. Choose the correct answer A, B, C or D.

1. What does a teacher need in order to do her best for children?
   A. She needs everything
   B. She needs only the best materials
   C. She needs the school and the community's resources and parent's cooperation.
   D. She needs money

2. What should a teacher do when he or she approaches a child, who does not make progress?
   A. punish the child
   B. seek the help of superiors and experts
   C. push her or his idea
   D. give up

3. What is the outcome of cooperation between teachers and parents?
   A. It helps them to understand and assist children
   B. It causes difficulties
   C. It makes their relationship better
   D. It helps them to design good programs for children

4. How can a preschool teacher teach cooperation?
   A. by pushing the idea
   B. by dictating the idea
   C. by playing
   D. by action and attitude

teachers, particularly new teachers, fear parents. Too often parents are only called into consultation when something is " wrong" with their child. Too often parents are burdened with helping in their children's school work. Too often parents cause difficulties by creating pressures that work to the disadvantage of their own children. Most of the time teachers and parents can work together in a much happier relationship, each helping the other to understand and assist the child.

The teacher should not hesitate to seek the help of superiors and experts as to ask for suggestions for understanding and assisting the child who is not making progress in school. There is an opposite reaction that comes from some teachers. They are heard to say, " I learned the hard way; let him do the same". There is a difference between pushing an idea and being willing to share it. All of us together know far too little to help some children.

Far more than any other person that one can think of, the teacher of young children should set an example in willingness to work with others. Early childhood is a period when children are learning what it means to compromise, to get along, to work together. Some otherwise fine teachers make no contact with fellow teachers or the public. As in all of life, the teacher teaches cooperation by attitude and action more effectively than by "dictation".

Under the best of circumstances it takes a while to discover what the possibilities in any given school situation are. Some orientation programs are much better than others. Even with the best possible program, however, few teachers can grasp all the intricacies of a program designed to offer help. Printed material is valuable but it explains how things are supposed to work. What actually happens may be different. Perhaps this introduction should have been headed: " Materials, Resources, and Resourcefulness". The teacher will keep her eyes and ears open, ask for answers to particular problems of anyone who can help, recognize that methods of operation change

B. According to the passage, which of the following statements are 'True' (T) and which are 'False' (F)? Insert 'T' or 'F', whichever is correct, in the boxes at the right.

1. The preschool teacher should be strong in every way. ☐

2. The cooperation between teachers and parents in a happy relationship works to the advantage of children. ☐

3. The suggestions of experts are not practical enough to help the teachers. ☐

4. Preschool children learn how to compromise and work together from the action and the attitude of the teachers. ☐

5. The preschool teacher should always be aware of the changes in methods of operation. ☐

Selected Vocabulary

compromise give up of certain demands by each side in a dispute, so that an agreement which satisfies both side to some extent, may be reached

In early childhood period children learn what it means to get along, to **compromise,** and to work together.

get along have a harmonious or friendly relationship; get on

A teacher should not only **get along** with the students but also she should get along with parents.

hesitate stop or pause because of uncertainty or indecision; pause in doubt

Do not **hesitate** to join the profession of preschool teaching.

intricacy complexity; complication; difficulty

A few teachers can grasp all the **intricacies** of a program which is designed to help.

resource thing that can be turned to for help, support or consolation when needed

An only child is often left to his own **resource** (left to amuse himself).

superior person of higher rank or position; who is better, stronger, more knowledgeable than others

We should obey our **superiors.**

2. VOCABULARY EXERCISES

A. Match each word in Column A with a word or an explanation in Column B. There are more words in Column B than you need.

A	B
1. inexpensive	A. alike or equal in number, value or meaning
2. basic	B. being consulted; consulting
3. supply	C. one who has special skill or knowledge
4. equivalent	D. fundamental
5. alert	E. perform
6. consultation	F. stock or store of things provided or available
7. expert	G. the state of being functional; working
8. operation	H. cheap
	I. hesitate
	J. attentive and quick to think or act

Lesson 14

Kindergarten is School with Full Curriculum

The highlights of the lesson

Any academic subject has a place in kindergarten curriculum. So in order to teach any subject in kindergarten we must consider:

1. Providing special learning experiences, while focusing on insight.
2. Letting children analyze what they have learned.

We should know that any academic area has a place in the kindergarten curriculum. The language, arts and numerical concepts are not treated as separate subjects to be taught at certain designated periods by lecture or demonstration -at least not usually. In one college laboratory kindergarten, a Spanish teacher volunteered to visit when she was able to do so and introduce the children to Spanish. No announcement was made that a Spanish lesson was to be given. The children were not asked to stop what they were doing when she arrived. The professor visited with the children as individuals and small groups, speaking slowly and carefully in Spanish. She uttered no word of English. Without any pressure the children not only became familiar with the sound and structure of the language, but over the year were able to call many things by their Spanish names and to speak in simple sentences in Spanish.

Other plans may be formulated to provide for special learning experiences, such as in science. The teacher may wish to take her class

B. Complete the following sentences, using the correct form of the following words.

deserve, get along, philosophy, hesitate, fear

1. Too often school teaches, particularly new teacher's _____ parents.
2. Children learn how to _____ with others children in the kindergartens.
3. A teacher should not _____ to seek the help of experts.
4. Respectful attention should be paid to the theory and _____ of education.
5. After studying hard for the test, he _____ a vacation.

D. teach by demonstration

2. The emphasis in most academic subjects is on _____.
   A. skill rather than insight
   B. the skill of observation
   C. insight, while the skills are developing through other activities
   D. the skill of reporting

3. A balanced kindergarten program includes _____.
   A. many different academic subjects
   B. teaching a child to listen
   C. addition and subtraction
   D. a well- planned lecture

4. A child who observes the emergence of the butterfly from the cocoon, is practicing _____.
   A. some insight
   B. psychology
   C. demonstration
   D. some skills

B. According to the passage, which of the following statements are 'True' (T) and which are 'False' (F)? Insert 'T' or 'F', whichever is correct, in the boxes at the right.

1. Although skill is involved, insight is emphasized in the academic subjects on the kindergarten level. ☐

2. The kindergarten curriculum emphasizes teaching science at certain periods by lecture rather than demonstration. ☐

3. Everyday, after learning experiences, the teacher should have the children take home a sample of "arts and crafts". ☐

to the zoo, the fire station, the airport, or on a field trip through the school yard to look for colored leaves or a variety of things that might be collected and studied on such an expedition. It may also include a cage with a pet hamster to be observed and cared for. The possibilities are endless just in the area of science. Usually the concepts involved in such subjects as biology, chemistry, economics, psychology, health, and geography will be the normal ingredients of a balanced kindergarten program. The children will be taught by the experiences of the classroom and the excursions of the class. The teacher needs nor lecture, nor will she usually demonstrate. She will provide the means for discovery by the children.

After a stimulating learning experience, the teacher may want to help the children analyze what they have learned. It may be more effective learning for the children to tell their parents what they learned from the study of magnets, for example, than to have them take home a sample of " arts and crafts" every day.

The emphasis in most academic subjects on the kindergarten level is on insight rather than skill. However, skill is involved. The child who observes the emergence of the butterfly from the cocoon, as many kindergarteners do every year, is practicing his skills of observation and reporting. So in almost any subject that might enter into the kindergarten curriculum, there is some form of skill development involved. The emphasis, however, is on insight: "What happens?" " How does it work?" Although the skills are developing, the purpose in the broad academic areas is usually insight.

1. COMPREHENSION EXERCISES

A. Choose the correct answer A, B, C or D.

1. According to the passage, to teach children science, the teacher must _____.
   A. give a lecture
   B. provide the means for discovery by the children
   C. take the children to the zoo

2. VOCABULARY EXERCISES

A. Match each word in Column A with a word or an explanation in Column B. There are more words in Column B than you need.

A.	B.
1. treat	A. put special stress
2. emphasis	B. deal with
3. utter	C. express in words, say
4. analyze	D. the reason for doing something
5. insight	E. examine methodically
6. purpose	F. construction
	G. clear or deep perception of a situation

B. Complete the following sentences, using the correct form of the following words.

discovery, structure, emphasis, treat, curriculum

1. Most academic areas have special places in the kindergarten_____ .
2. Never _____ children cruelly.
3. Teacher should provide the means of _____ for children.
4. In the preschool period the _____ on insight is much more than that of skill.
5. The _____ of their language is very complicated.

4. It is essentially by demonstration that we can teach kindergarteners a lot of things about magnets. ☐

Word Study

analyze study or determine the nature and relationship of the parts…..by analysis

By **analyzing** the parts of a sentence we learn more about English grammar.

announcement the act of making known publicly; a public notice

There is still no **announcement** about the seminar on child Education .

expedition organized journey with a particular aim; a journey or trip undertaken for a specific purpose

The purpose of this **expedition** is to learn about nature.

formulate express in a formula; state clearly and definitely

Can you **formulate** a new theory about preschool education?

skill ability that comes from training or practice; a developed or acquired ability

The emphasis in most academic subjects on kindergarten level is on insight rater than **skill.**

treat handle; provide with food, entertainment, enjoyment

We must **treat** children nicely.

The young child approaches things largely on the sensory and motor level. He or she needs to come into contact with things— to feel and see and smell them over and over again — before really getting to know them. Many mistakes in preschool education stem from our tendency to forget this need. We often overestimate a young child's ability to think like an adult, to approach reality on an abstract, symbolic, and highly verbal level. And we underestimate — and undervalue- the child's ability to grow and learn in largely nonverbal, concrete, and pre-symbolic ways. A child's play is a unified and unitary experience, and the child learns through play in at least four ways:

1. The child learns about physical things through manipulative and motor play of all sorts.

By working with blocks, manipulation toys, sand and water, the child learns about the shapes, dimensions, and conceptual properties of things. The child discovers their similarities and differences, sorting them out and classifying them according to color, size and weight. The child finds out what he or she can and cannot do with them.

2. The child learns about the world of people through dramatic and other kinds of joint play. By acting out various " roles" such as doctor, father, mother, nurse, policeman, and fireman, the child learns about the different relations people have with each other in society. By playing with other children in the block corner, at the water faucet, or wherever, the child learns about himself or herself in relation to others— about the need for give and take, taking turns, and sharing. The child learns that others may have different points of view, feelings, and so on.

3. The child learns about himself or herself. In dramatic play, the child acts out his or her fears, frustrations, and feelings. In art, in water play, in block play, the child works these emotions out by expressing them in nonverbal forms. With every new experience, the

Lesson 15

Whatever a Body is not Obliged to Do: Play

The highlights of the lesson

This lesson intends to point out that play is an integral part of children's life and should be largely emphasized in early childhood education programs.

Through play children:

1. learn about physical world.
2. become familiar about the world of people (grow socially).
3. learn about themselves.
4. develop physically by using indoor and outdoor facilities.

There is really on satisfactory way to describe play, let alone define it. In general, it is anything done without some strictly utilitarian purpose and without coercion. Mark Twain once wrote that "play consists of whatever a body is not obliged to do"- which is acceptable enough, except that the young child is obliged to play. For the child, play is not simply a pleasant or peripheral pastime, but very largely the major reason for living. The child plays not to avoid reality but to encounter it. Play is the idiom by which children express themselves and the avenue through which they explore, experience, and interpret the world around them. It is the way they work- and the primary language through which they learn.

child encounters a new aspect of himself or herself; every new skill, every new accomplishment, represents a new discovery, for it is something that was not there before.

4.The child develops physically. The child develops and coordinates small and large muscle movements through active participation in both indoor and outdoor activities and by using proper equipment's.

1. COMPREHENSION EXERCISES

A. Choose the correct answer A, B, C or D.

1. How does a child learn about the world of people?
   A. by playing with different toys
   B. by expressing his/her emotions through different actions
   C. by acting out roles of different professional groups
   D. by going to a doctor's office, fire station, hospital and so on

2. Through play, a child learns:
   A. how to pass his time agreeably
   B. how to discover, experience and interpret the world around him
   C. how to be obliged to play
   D. how to avoid reality and how to forget his or her family problems

3. According to the article, what do we underestimate, when it comes to children?
   A. their ability to think like grownups
   B. children approach things largely on the verbal level
   C. children's ability to learn on the nonverbal level
   D. children approach things on an abstract and symbolic level

4. What good does participation in indoor and outdoor activities do?
   A. it helps the children to develop physically
   B. it helps the child to express his or her frustrations
   C. it only pleases the child
   D. it helps the child think like an adult

B. According to the passage, which of the following statements are 'True' (T) and which are 'False' (F)? Insert 'T' or 'F', whichever is correct, in the boxes at the right.

1. Play is a must for a young child. ☐
2. The main purpose of dramatic play is physical development. ☐
3. Through play the child explores the world outside as well as the world inside. ☐
4. The concept of social relationships does not form in young children until school time. ☐

Word Study

coercion compulsion; forcing

Anything done without utilitarian purpose and without **coercion** and pressure can be called **play**.

encounter come upon face to face; come upon unexpectedly

I **encountered** many difficulties when I first started this profession.

overestimate value too highly, over valuation

we should never **overestimate** or underestimate child's ability to learn in nonverbal way.

satisfactory sufficient or adequate to please
There is no **satisfactory** way to describe play.

underestimate see too low a value, amount or rate
Never **underestimate** children potentials.

utilitarian designed to be useful rather than luxurious or decorative; severely practical, useful
Utilitarian thinking focuses on the end results of a decision.

2. VOCABULARY EXERCISES

A. Match each word in Column A with a word or an explanation in Column B. There are more words in Column B than you need.

A	B
1. encounter	A. of or based on general notions or ideas
2. conceptual	B. a particular way in which something appears or may be regarded
3. concrete	C. tangible
4. sort	D. portray; show
5. aspect	E. forced; compelled
6. represent	F. class; type; way
	G. meet

B. Complete the following sentences, using the correct form of the following words.
underestimate, aspect, discovery, concrete, approach

1. _____ examples can make complicated lessons understandable.

2. The scientific _____ changed the old system of communication.
3. Didn't you _____ the difficulty of a preschool teacher's task?
4. Let's consider the best way to _____ the problem.
5. I study every _____ of his offer.

Mathematics and Reading in Kindergarten

The highlights of the lesson

This lesson intends to cover 2 kindergarten curriculums: Mathematics and reading. The students are expected to learn the following:

1. Children come to kindergarten with many quantitate concepts, but their mathematical knowledge has a root in their memories.
2. The kindergarten teacher should teach math by setting the stages and involving children is situation in which mathematic concepts are needed.
3. There is not usually a formal reading lesson in kindergarten.
4. Reading is introduced to children through story telling, directing children to make their own rhymes and interesting poems.
5. Children began to recognize letters and words through playing with alphabet blocks, seeing their names on their storage shelves and personal accessories, and, … .

Mathematics

A parent may ask a kindergarten teacher, " Do you teach arithmetic? " The answer could be both of the following:

"Yes and so do you," and we both teach even more than arithmetic." Almost every child is constantly interacting with a world of sizes, shapes, numbers, and relationships. No one is sure as to how far back this learning goes — perhaps as far back in life as the

beginning of the learning of verbal communication. However vague the baby's understanding of what he sees, however faulty his reach for any object, there is growth toward quantitative understanding.

Children come to kindergarten with various quantitative concepts. Although they may be limited and faulty, nevertheless, they form a foundation upon which the kindergarten can built with a flexible, realistic, appropriate, and informal program. Some kindergarteners are able to tell their street address, telephone number, and other numerically related facts— how old they are in years, and sometimes, months; how many people in their families. They may have been taught to count to ten, or one hundred, or even a thousand. Sometimes they can count by twos, by fives, and by tens. The artful kindergarten teacher is aware and makes use of this knowledge. She will not, however, be falsely impressed by these achievements. Some children can do all of these things from memory without really understanding any of it. Still, there is something of value here. The parents are pleased, and the child is proud of his achievement. At least he/his is demonstrating a good memory. To the parent the teacher says, " Good," and suggests additional ways of helping the child develop toward competence in arithmetic. Parents can put meaning into numbers by helping the child count objects, use money, and notice forms, shapes, and sizes.

The effective kindergarten teacher teaches mathematics, chiefly, by setting the stage and then involving the children in situations in which mathematical concepts are needed. When teaching arithmetic in kindergarten, the teacher will seldom have a lesson devoted only to arithmetic. Sometimes it is design and mathematics. Perhaps it is music and mathematics. Other times it is language and mathematics or any multiple combination of these and others. It can be problem solving using mathematics. There can be creative thinking involving

Sometimes during the large group time there will be nursery rhymes and poems of interest to the children. These can be learned and said together as a choral group. Children enjoy the feel and the sound of words. They may enjoy the experience even more if they can act out the poems and rhymes. Some children may even gain insight to life through the theme of a poem or story. Thus an appreciation and depth of understanding in the language arts and reading in its fullest sense are increased. When the children begin to make up their own rhymes, there is a different type of growth. It is a start toward literary production. In these and other ways, kindergarten is providing language arts instruction for all children; it is being done easily, gently, and without pressure.

Children are constantly exposed to reading stimuli. There are many things to read in almost any kindergarten. Most teachers put a name tag on each child when he first enters school. Names will appear at other times and various articles will be labeled with the child's name, such as individual storage shelves. Children will soon recognize their own names and even the names of the other children. Children learn to recognize words with special meaning to them. For example, they seem to have little trouble with such words as candy, ice cream, Halloween, and Christmas. There are usually alphabet blocks around if the children want to use them in forming words. Even if they do not put words together, they become familiar with the shapes and sometimes the names of the various letters.

1. COMPREHENSION EXERCISES

A. Choose the correct answer A, B, C or D.

1. When does mathematical learning begin?
   A. It begins when a child interacts with a world of sizes, shapes and numbers.
   B. It begins when a child enters kindergarten.
   C. It begins much earlier than kindergarten.

mathematics and decisions based on mathematics. It is difficult to teach anything that has no relationship to arithmetic.

There are many useful games and instruments that can be used on different levels. However, when the teacher finds one that may work in her kindergarten, she should not be afraid to try it. There is no harm in trying something that does not work if the teacher takes it in stride. The purpose is to discover ways of helping children, not to force anything on them. If one project does not succeed, the teacher learns something from the experience, but she should feel neither frustration nor defeat.

Reading

Kindergartens teach reading at special times and in special ways. Exactly what the teacher plans, her materials, and her resources will depend partly on the time of the year, the interest of the children, and the children's background of experiences in and out of school. Most teachers do plan for some class involvement in experiences related to reading. There will not be a formal reading lesson unless it is a very exceptional class, and probably not then until close to the end of the school year. An illustration of the more informal type of learning related to reading occurs during the relatively short periods of time when most of the group will get together. It may be a " sharing" time, which provides practice in listening and communication. The same children should not do all the sharing everyday.

There are also times for reading to children and for story telling. The teacher may have a book in her hand —not primarily to read the story, but to impress the children that stories are found in books. The teacher builds a love for books and an interest in reading. A good teacher will dramatize the story and make it come alive. This is leading toward formal reading.

D. It begins with verbal communication.

2. Which of the following can be named as the most effective ways of teaching numbers?
   A. Emphasizing the number of days remaining until Christmas
   B. Involving the children in situations in which mathematical concepts are needed
   C. Lecturing and making a child copy numbers
   D. Teaching planned lessons devoted only to arithmetic

3. If one of the instruments or games that you have chosen to help your children learn mathematics does not work, how should you, as a preschool teacher, feel?
   A. You should feel defeated.
   B. You should feel frustrated.
   C. You should be afraid to try it.
   D. You should learn something from the experience and try other ways that may work.

4. Do counting to ten, telling street address and telephone number by a child mean that he or she knows numerical concepts?
   A. Yes, and a teacher should be impressed by these achievements.
   B. Yes, because this shows a child's competence in arithmetic.
   C. No, because a child can tell these things from memory without really understanding them.
   D. No, and a teacher cannot even make use of this knowledge.

5. How can a teacher encourage children to read?
   A. by letting children join or drop
   B. by testing and re-testing her or his tentative conclusions about children's interest and maturity
   C. by reading books all the time

   D. by building toward a love for books and an interest in reading in special ways

6. Teacher's plan and materials for teaching reading in kindergarten partially depend on:
   A. what parents seek for
   B. the agreements of the supervisor
   C. the number of teacher assistants in the class
   D. children past experiences and interests

B. According to the passage, which of the following statements are 'True' (T) and which are 'False' (F)? Insert 'T' or 'F', whichever is correct, in the boxes at the right.

1. When children come to kindergarten, they have already started mathematical learning. ☐

2. To be more effective, arithmetic should be taught separately and not mixed with other activities. ☐

3. Competence in arithmetic is achieved by emphasizing memory rather than meaning. ☐

4. An artful teacher can make the best use of mathematical implications of different activities to teach arithmetic. ☐

5. A good kindergarten teacher plans formal reading lessons, using exceptional resources. ☐

6. Singing rhymes in choral groups and acting out the poems are some experiences related to reading. ☐

7.Without knowing the alphabet, kindergarteners can recognize some words that have special meaning to them. ☐

Word Study

exceptional very unusual, superior
I can not compare him with other children, he is an **exceptional** child.

frustration defeat, the condition of being disappointed
If one project does not succeed, the teacher should not be **frustrated.**

impress to affected deeply and strongly, influence
We **impress** children by showing them the pictures found in story books.

interact act on one another
Children must learn how to **interact** with others.

label A piece of paper, etc that is attached to something and gives information about it
Most teachers **label** children's bags with child's name.

proud having proper self- respect; displaying excessive self- esteem
The parents are pleased and the child is **proud** of his/ her achievement.

take something in stride to cope calmly, do something without difficulty
If the teacher **takes it in stride,** there will be no harm in trying something that does not work.

vague not clearly expressed
His talk in the parent-teaching meeting was **vague.**

2. VOCABULARY EXERCISES

A. Match each word in Column A with a word or an explanation in Column B. There are more words in Column B than you need.

A.	B.
1. dramatic	A. the power of recalling what has been learned
2. trouble	B. problem, difficulty
3. artful	C. not clearly expressed
4. vague	D. an example, picture of diagram intended to make clear
5. memory	E. skillful and clever in achieving a desired goal
6. exceptional	F. make a novel or an event into play
7. illustration	G. several, various
8. multiple	H. being an exception, super passing
9. faulty	I. expedition
10.production	J. marked by mistake
	K. the act of producing

B. Complete the following sentences, using the correct form of the following words.

proud, impressed, defeat, background, depend on, exceptional, trouble, exposed to

1. Teachers plan and resources _____ the time of the year.
2. The child was left _____ the wind and rain.
3. He answered my questions in a _____ manner.
4. Her parents were _____ by her academic progress.
5. _____ should never keep a teacher from trying.

6. This girl seems to have _____ reading ability.
7. Teacher must help the children who are in _____.
8. Her strong _____ in math made her better than others in the field.

Lesson 17

Nature and Science: All things Bright and Beautiful

The highlights of the lesson

This lesson intends to guide us in teaching science and nature in childhood programs. The students are expected to learn the following points:

1. The activities that stimulate children to appreciate and develop a scientific approach to the world around them.
2. The ways that a teacher can make a scientific field trip effective.

Wonder, which is the beginning of knowledge, is also the basis of the young child's approach to the natural world - because it leads him both to explore its variety and to seek to understand its mystery; how things look, sound, change or remain the same, feel, and grow. The aim of nature and science activities in preschool is primarily to stimulate the child's appreciation of the marvelous variety of his world and his interest in understanding its behavior. More specifically, nature and science; have the following objectives.

First, they should help children to come to respect things - especially the living things - of the physical and natural world. They should come to understand that, plants and trees and animals are there to be used and enjoyed by man, and they cannot be abused.

Second, they should help children understand the interdependent relationship between all things in the natural world – especially between man and that world.

Third, they should help children develop a " scientific" approach to the world around them: to observe closely and carefully, to make and test hypotheses, to generalize, and to change their minds on the basis of new evidence.

Outdoor Activities

Since one aim of the preschool nature and science program is to expose children to as many direct and different experiences of the natural and physical world as possible, they need to take frequent field trips to farms, parks, zoos, and woods – to care for plants and bushes and animals in the playground.

Field trips can be useless, if the teacher does not carefully and deliberately relate them to some objectives in the curriculum; field trips are not ends in themselves but opportunities for exposing children to experiences that they cannot encounter within the confines of the classroom or playground. Such excursions do vary the routine and may occasionally be valuable on that account alone. If children are to derive genuine educational benefit from them, rather than mere distraction, the teacher must explain their purpose and amplify on the experience before, during, and after the field trip itself.

Suppose, for example, you are taking the children for a walk in the woods and you want to emphasize the varying shapes of leaves, as well as their similarities and their functions. You might, beforehand, let the children look through some simple picture books about leaves, or have them view slides or films, or bring to school leaves they found around their homes. During the walk you will find many occasions to answer their questions about this or that leaf, to ask them questions or suggest possibilities. Give the child a bag on every walk so that he can pick up leaves or anything else that interests him.

After the trip these gatherings can serve as the basis for discussions, for classifying activities, for drawing, and so on. A leaf can be compared with illustrations in picture books. Maybe each child will want to see how many leaves he has that match the illustrations in a book. Perhaps a child may want to " act out" a leaf swaying or tossing in the wind, a leaf opening in the spring or falling in the autumn.

The same kinds of things can be done with stones, birds, animals, with plants in the sun or in the shade (observing and analyzing the different"environments" of sun and shade). The variations depend only on the teacher's ingenuity at using the raw materials of experience and his or her alertness to the signs of interest in the children.

Along with helping a child understand the work of the natural world, science programs should aim at building the child's respect for the fragileness of life.

Taking care of plants and animals within the school grounds can be a part of the children's regular daily activities. A greenhouse would enable children to work with plants during any season (and also understand something of the effect of temperature and sun and humidity). Let the children make and tend a garden. To do so, have the children prepare the ground. Make them buy or collect seeds. Have the children plant seeds. Get them to water them and to discuss why some have sprouted and some have not, why some have died and some not. A birdhouse, of course, is a natural for a preschool, not only giving the children a sense of pleasurable responsibility for the birds they feed but also opening up possibilities for observations of color, variety, and number: they can count the birds they see, identify them in reference books, draw, paint, and model them, compare their sizes, and discuss why some species appear regularly, while most species never come. Do not forget that as a preschool teacher you play an important role in helping the children to understand, appreciate and respect the natural world.

I. COMPREHENSION EXERCISES

A. Choose the correct answer A, B, C or D.

1. According to the article, which of the following is the objective of nature and science activities?
   A. These activities should help children to understand the dependent relationships.
   B. They should help children to develop a sensitive approach to the world around them.
   C. They aim at changing children's minds.
   D. They should help children respect living things.

2. How can field trips be useful?
   A. They can be useful if the teacher relates them to some objectives in the course of preschool education programs.
   B. They can be useful if the teacher does not deliberately relate them to some objectives in the curriculum.
   C. They can be useful if the teacher lets the children experience everything themselves.
   D. They can be useful if the teacher takes children to the farms, parks, and zoos rather than woods.

3. What do children mostly learn through taking care of plants and animals?
   A. They develop a natural approach to the world
   B. They develop a scientific approach to the world around them as well as a sense of responsibility
   C. They learn how to get along with other children and how to play with pets
   D. They learn how to abuse plants, trees and animals

4. According to the author through outdoor activities, a child not only understands the working of the natural world but also _____.

   A. learns how to go to the parks, zoos, woods and farms
   B. learns how to abuse nature
   C. learns how to take care of nature and appreciate.
   D. learns how to paint and draw

B. According to the passage, which of the following statements are 'True' (T) and which are 'False' (F)? Insert 'T' or 'F', whichever is correct, in the boxes at the right.

1. Wonder leads the child to explore and understand the natural world. ☐

2. We should not seek any educational benefit from field trips because they are mere distractions. ☐

3. Nature and science activities help the child think like a scientist. ☐

4. By taking the children to farms, zoos and parks, you can teach them the complicated relationship between man and nature without lecturing. ☐

Word Study

abuse mistreat; make bad or wrong use of something
We should warn the children not to **abuse** the nature.

deliberately considerably; voluntary
teacher must **deliberately** relate field trips to some objectives in the c
is to curriculums.

distraction an interruption; disarray
There should be no **distraction** while children are discovering nature in a field trip.

B. Complete the following sentences, using the correct form of the following words.

basis, abuse, toss, hypothesis, interdependent, encounter

1. When Columbus first presented his _____ that the earth is round very few people believed him.
2. We must help children to understand the _____ relationship between things in the natural world.
3. Wonder is the _____ of the young child's approach to the natural world.
4. Field trips are opportunities for children to experience what they cannot _____ in the classroom.
5. Children love to _____ the ball in the air.
6. People mistreat and _____ children all over the world.

fragileness brittleness; delicateness
The **fragileness** of children's happiness was the theme of her lecture.

ingenuity cleverness and originality in discovering, inventing or solving problems
The success of his teaching method was largely due to his **ingenuity.**

marvelous wonderful; astonishing
It's **marvelous** to see children progress in our classes.

stimulate to exited and encourage to start or progress further
The aim of science activity is to **stimulate** children appreciation of the world.

2. VOCABULARY EXERCISES

A. Match each word in Column A with a word or an explanation in Column B. There are more words in Column B than you need.

A	
1. wonder	A. human being
2. stimulate	B. an interruption; disarray
3. match	C. be equal to; be alike
4. distraction	D. feeling of surprise mixed with admiration or disbelief
5. mystery	E. feel, touch
6. confine	F. secret
7. man	G. animate; arouse
8. before hand	H. restrict, boundaries
	I. in advance, a head of time

Lesson 18

Art and Sculpture for a Preschool Group: Making a Mark on the World

The highlights of the lesson

This lesson intends to introduce art and sculpture by which children express their own creativity. You are expected to know

1. Tha out comes of molding, scribbling and painting done by preschool children.
2. Do not nudge children production and never push them to copy or draw something that they recognize
3. How can we enable children to reach their final stage of self-taught art.

More than most other forms of preschool activity, art and sculpture enable children to express themselves by making their own mark on the world. In the process, while they strengthen their sense of visual discrimination and their abilities to manipulate things with their fingers, while they explore the possibilities of color and shape and various materials, they also discover a good deal about themselves.

This is passible if teachers are careful not to impose their adult standards of what constitutes"art " Children's skills with numbers, language, and the use of their muscles for running and jumping, and in most other aspects of the preschool curriculum, can be evaluated by objective measurements. Art and sculpture, however, are primarily areas in which youngsters should be free to express their own

creativity in any way they please; many youngster's interest in making his or her own art has been stifled by a teacher who coaxed the drawing of "recognizable " objects (recognizable to the teacher, that is) or who provided coloring books that do most of the child's creative thinking for him.

Until about the age of seven, children are as much interested in the process of art as they are in the product. At most, the product - whether painting, or collage - is a mirror of the process, and youngsters lose interest in what they have done soon after they complete it. One " process" is over, and it is time to begin another.

As preschool youngsters mold and scribble and paint, they are doing at least four things:

1. They are developing various kinds of skills: increasing manual dexterity, improving their visual discrimination and sense of touch.

2. They are building up what Rhoda Kellogg in The Psychology of Children's Art, calls a " basic repertoire", of patterns, shapes, and designs that enable them to do progressively more elaborate and intricate things.

3.They are becoming much more aware of colors, shapes, forms, and textures in their world, an awareness that carries over into science, math, and language activities.

4.They are expressing - though without being aware of it - their feelings in a personal, nonverbal, constructive form.

In brief, they are both developing and discovering themselves through action. Because art is one of the few human activities that allows people to act without subjecting themselves to standards of " right " and "wrong". The preschool teacher must take care not to stifle this channel for personal expression by telling children what to draw or in other ways restricting their creativity. If the result is a mess, that's all right; the point is his or her mess.

One value of art in preschool accrues to the teacher rather than to the children. Adults tend to approve of children's art when they can see in a painting, drawing, or shape a form that they recognize – a

house, an animal, a tree. Most of us, however, are blind to the artistic appeal of interesting combinations of color and form when they are totally abstract– i.e., when they seem to represent nothing whatsoever. By withholding judgment on children's productions and by staunchly forbidding themselves to push children to draw something they can recognize, teachers may rediscover an interest in color and shape, pure and simple, that comes naturally to children but is frequently lost by adults. Because of the pressure applied by parents for art and sculpture that they can recognize, it may be helpful to know that most children do not enter into the "pictorial stage" of art – that point at which their drawings begin to look like things – until they are four or five years old. Before that, they progress from simple scribbling – apparently aimless lines – to pattern.

Undecipherable as most of these scribbles and patterns are, they appear with striking regularity and sequence in the drawings and paintings of children at certain ages no matter what their socioeconomic background, or even their national origin. The children's job, in art as in other activities, is to respond to the child's needs as he or she expresses them. The teacher should be ready to demonstrate a technique– finger painting, for example, or the design of a mobile– if a child expresses an interest in learning something new. After the demonstration, and an invitation to the youngster to try his or her own hand at it, the teacher should drop the subject rather than try to prescribe the content of an art activity. Indeed, the only rules that teachers should set for art are rules for themselves.

"Children who are left alone to draw what they like," writes Kellogg, " develop a store of knowledge which enables them to reach their final stage of self- taught art. Most children, however, lose interest in drawing after the first few years of school because they are not given this chance to develop freely". What is true about drawing is also true about every other form of art and sculpture.

1. COMPREHENSION EXERCISES

A. Choose the correct answer A, B, C or D.

1. when do children enter into "pictorial stage" of art?
   A. when they are 2 years old
   B. at the age of 4 or 5
   C. at the age of 2 or 3
   D. immediately when they enter nursery school

2. Why do most children lose interest in drawing during or after the first few years of school?
   A. because teachers and parents do not value whatever expression the child happens to make
   B. because teachers and parents do not approve children's drawings when the drawings are recognizable and familiar
   C. because children do not have a good model to follow
   D. because teachers and parents are not able to provide the necessary tools

3. According to the article, _____.
   A. art is an action through which children develop and discover themselves
   B. art helps us to act with subjecting ourselves to value judgments
   C. art helps children improve their visual discrimination and sense of hearing
   D. art is an action through which children consciously express their feelings

4. According to Kellogg, how can children reach the final stage of self- taught art?
   A. if teachers impose their standards
   B. if teachers leave children alone
   C. if teachers give children a chance to develop freely
   D. if teachers try to prescribe the contents of an art activity

B. According to the passage, which of the following statements are 'True' (T) and which are 'False' (F)? Insert 'T' or 'F', whichever is correct, in the boxes at the right.

1. Children, having different socioeconomic background or national origins, produce different scribbles and patterns. ☐
2. Art is a suitable channel for personal expression. ☐
3. The preschool teacher must be careful not to let the children make a mess. ☐
4. For the preschoolers, it is the process of art which is important, not the product. ☐
5. Setting rules for art will ruin children's interest and creativity. ☐

Word Study

abstract difficult to understand; having only intrinsic form with little or no attempt at pictorial representation

I cannot understand these lines in children's drawing. They are **abstract**, but they certainly represent something important.

coax gain by gentle persuasion or flattering

She **coax** her child to do his homework..

dexterity skill and ease in using hands

Children increase their manual **dexterity** through scribbling and painting.

repertoire collection; a stock or store of something

fragileness brittleness; delicateness

The **fragileness** of children's happiness was the theme of her lecture.

ingenuity cleverness and originality in discovering, inventing or solving problems

The success of his teaching method was largely due to his **ingenuity.**

marvelous wonderful; astonishing

It's **marvelous** to see children progress in our classes.

stimulate to exited and encourage to start or progress further

The aim of science activity is to **stimulate** children appreciation of the world.

2. VOCABULARY EXERCISES

A. Match each word in Column A with a word or an explanation in Column B. There are more words in Column B than you need.

A	
1. wonder	A. human being
2. stimulate	B. an interruption; disarray
3. match	C. be equal to; be alike
4. distraction	D. feeling of surprise mixed with admiration or disbelief
5. mystery	E. feel, touch
6. confine	F. secret
7. man	G. animate; arouse
8. before hand	H. restrict, boundaries
	I. in advance, a head of time

B. Complete the following sentences, using the correct form of the following words.

abstract, impose, dexterity, discrimination, sequence, forbid, stifle

1. You can't expect a child to have the same _____ as a master craftsman.
2. Don't _____ children to express themselves in their free drawings.
3. Children's paintings are usually _____ .They are hardly recognizable.
4. We should be careful not to _____ children's interest in producing works of art.
5. That TV program showed the _____ of the events.
6. Teachers should not _____ their wills on students.
7. A teacher should not _____ among children and must treat them equally.

@LOTUS_PNU

Lesson 19

Computer

The highlights of the lesson

The most important points of this lesson are:

1. What should be considered when introducing technology to a child.
2. The teacher's role in the children use of technology.
3. The goal of using computer in early childhood education.

The use of technology in the curriculum is based on the needs of the children, the focus of the curriculum, and whether the technology will add to the children's educational opportunities and experiences.

The age of the child and his or her developmental stage must be taken into account when considering computer use. Two important questions need to be asked when introducing young children to anything new, including technology.

-Is it developmentally appropriate – is it consistent with how a child develops and learns, and with the child's current developmental stage?

-Will the activity benefit the child?

For very young children the answers to these questions are usually "no". Computer use for most children under age three does not have meaning for the child.

"Children frequently use computer for short periods, then become interested in another activity. Three to five-years-olds generally spend about the same amount of time at a computer as they

do on other activities such as playing with blocks or drawing. They are more interested and less frustrated when an adult is present, and much of the computer use will be facilitated or mediated by the teacher, which is consistent with best practice at this level." (Clement & Nastasi,1993)

"For this age the value of the computer is in its open-ended use, not in creating a product" (Davidson & Wright,1994). The teacher's role is to create an environment in which children become aware and explore, and then act to support their exploration and inquiry in many different ways. Software programs for this age group should be limited in number and appropriate for children's skill level and the intended use.

As children become more able to read and write on their own, "five to eight years or primary grades", they are not limited to icons and pictures on the screen for understanding. More opportunities for independent use become available with increasing language and literacy skills. For example, simple word processors become important educational tools as children experiment with written language.

The teacher's role is to set up the environment and activities, matching technology use to the curriculum as well as to the children's need and interests. The teacher is less involved in directing the activities, and more involved in monitoring student activities, intervening guiding and posing question to encourage thinking.

" It should be noted that if computers are not fully integrated into the overall curriculum, they can actually negatively impact children's creativity "(Haugland, 1982).

" Use of technology in the early childhood program must not be a goal by itself; the

purpose is not to teach children how to use computers. They can do this as they get older, just as they can learn to drive a car later in their lives" (Wardle, 1999). Appropriate use of technology in the classroom is going to expand, enrich, implement, individualize, differentiate, and extend the overall curriculum.

1. COMPREHENSION EXERCISES

A. Choose the correct answer A, B, C or D.

1. In order to introduce something new to young children we must consider _____.
   A. the benefit that the child gets from it
   B. the meaning of working with young children
   C. that new technology is useful for every child
   D. that children are not interested in new technology

2. The teacher's role is _____.
   A. to teach children how to use a computer
   B. to match the computer use to the interests and needs of children
   C. to add technology to the preschool curriculum
   D. to stay away and let children play with a computer for unlimited amounts of time

3. It is important to take _____ into account when considering computer use.
   A. many questions
   B. educational opportunities
   C. the value of computer
   D. children age and their stages of development

4. Simple word processors become important educational tools _____.
   A. when children are over three years old
   B. when children are eight years old
   C. for primary graders
   D. when teachers are more involved in guiding the activities

B. According to the passage, which of the following statements are 'True' (T) and which are 'False' (F)? Insert 'T' or 'F', whichever is correct, in the boxes at the right.

1. The use of technology in the curriculum is a "must" in a preschool education program. ☐

2. According to the passage computer is not a necessity for children over age four. ☐

3. If the use of technology is not integrated with the curriculum, it can limit the children's creativity. ☐

4. The goal of using computer in early childhood centers is to teach children how to use computers. ☐

Word Study

facilitate make easy or easier

When the use of computer is **facilitated** by an adult, children become more interested in computer.

icon an image; a picture

There will be enough **icons** and pictures on the screen for children to understand the subject.

individualize to make individual or distinctive; to mention, indicate, or consider individually; specify; particularize

How can technology help teachers **individualize** teaching materials to make learning process engaging and challenging for all students?

intervene to become involved in an argument, fight, or other difficult situation in order to change what happens

The teachers were watching the students and **intervening** only when necessary.

open-ended without any limits, restrictions or aims set in advance

The ability to ask **open-ended** questions is very important in many vocations, including education, counseling, mediation, sales, investigative work and journalism.

pose to present, a threat

By **posing** questions, teacher can encourage children to communicate.

2. VOCABULARY EXERCISES

A. Match each word in Column A with a word or an explanation in Column B. There are more words in Column B than you need.

A.	B.
1. expand	A. to have an effect on something, influence
2. inquiry	B. implement
3. monitor	C. to make easier or less difficult
4. impact	D. establish, make ready for use
5. consider	E. to watch and check something over a period of time
6. facilitate	F. develop
7. perform	G. to damage something or make something weaker
8. set up	H. take into account
	I. a request for help or information about somebody or something
	J. to observe carefully

B. Complete the following sentences, using the correct form of the following words.

facilitate, impact, literacy, integrate, mediate

1. The teacher's suggestions had great_____ on parents.
2. I hate having to _____ the constant battles between my director and teacher assistant.
3. It would _____ matters if you were more cooperative.
4. Today ---------- is far more than the ability to sound out a few letters of one syllable word.
5. Children are the _____parts of child care centers.

Lesson 20

Disabled Children

The highlights of the lesson

The intention of this lesson is to introduce disabled children. After reading this lesson you must know the meaning of:

1. Learning disability
2. Sensory disabilities
3. Physical disabilities

Learning Disabilities

Children with a learning disability have problems with the messages to the brain becoming jumbled. This makes it difficult for them to learn in one or more areas, such as reading, math, spelling, or writing.

Since children with learning disabilities may have short attention spans, try various methods to see how the children learn best. For example, they may learn best by seeing, hearing, reading silently or aloud.

Sensory Disabilities

Sensory disabilities include visual impairment or loss of sight, hearing impairment, and physical disabilities which are divided into two types: orthopedic and neurological, mental disorder. When working with children who cannot see well, introduce yourself so they are aware that you are speaking to them. It is not necessary to raise your voice

when talking with blind children. Speak directly to them and not to the person that is with them.

Visually impaired children need to become familiar with new rooms or places. Give them a tour of any place they have not been before. Let the visually impaired child touch, smell, or taste, if possible. Talk about the things they are exploring.

When working with children with a hearing impairment, try to speak clearly and slowly. It is not necessary to exaggerate or shout. Even though someone is wearing a hearing aid, that does not necessarily indicate they can hear normally or understand spoken words. The hearing aid may make sounds louder, but not always.

Children with orthopedic disabilities have many different levels of abilities and may use different adaptive devices like wheelchairs. Activities should be planned for the needs and abilities of each person. When you talk to children with neurological disabilities, be sure to talk to them directly. Remember that these children often have difficulty speaking clearly. This does not mean they are mentally retarded. They may use communication boards (electronic devices or a simple wooden board) complete with key words or the alphabet.

If a child uses special equipment, know how the equipment works; avoid situations that cause stress or tension. It is important to learn the truth about special children so there can be mutual caring and acceptance between you and disabled children.

1. COMPREHENSION EXERCISES

A. Choose the correct answer A, B, C or D.

1. Problems with the message to the brain make it hard for the children to _____.
   A. try various methods of learning
   B. read silently or aloud
   C. learn in a few areas

   D. attend the educational centers

2. When working with a child with visual impairment, _____.
   A. raise your voice
   B. it is not necessary to introduce yourself
   C. try to speak clearly
   D. speak directly to him/her

3. Children with _____ often have communication problems.
   A. orthopedic disabilities
   B. visual disability
   C. visual aid
   D. neurological disabilities

4. Disabled children, wearing hearing aids _____.
   A. can always hear and understand spoken words
   B. need to be talked to slowly and clearly
   C. can hear normally
   D. need louder voice in order to understand

B. According to the passage, which of the following statements are 'True' (T) and which are 'False' (F)? Insert 'T' or 'F', whichever is correct, in the boxes at the right.

1. We should plan activities according to the needs and abilities of each orthopedically disabled child. ☐

2. Sensory disability does not include mental disorder. ☐

3. Familiarity with new places is very necessary for visually impaired children. ☐

4. Children with a learning disability have problems of mixing things together in an untidy way because of the problem they have in sending messages to the brain. ☐

Word Study

impair damage; the occurrence of a change for the worse Try to speak clearly, when you are working with a child with a hearing **impairment**.

learning disability any of various cognitive or psychological disorder that impact ability to learn

Learning disability can cause a child to have difficulty in learning and using certain skills.

retarded slow in mental or emotional or physical development

Love is the most important thing that you can give to a mentally **retarded** child.

sensory retarded to senses or sensation

A child with **sensory** impairments has the same right to use services ad activities as other children.

tension mental, emotional or nervous strain

She felt considerable **tension** before the exam.

2. VOCABULARY EXERCISES

A. Match each word in Column A with a word or an explanation in Column B. There are more words in Column B than you need.

A.	B.
1. exaggerate	A. anxiety
2. adaptive	B. partially sighted
3. visually impaired	C. familiar
4. tension	D. suitable for,
5. blind	E. sightless
	F. overstate

B. Complete the following sentences, using the correct form of the following words.

stress, visual, hearing aid, jumble, attention span

1. Sometimes, children questions _____ the teacher's mind.
2. The loss of sight is called _____ impairment.
3. Wearing a _____ does not mean that a child can hear normally.
4. Misunderstanding special children causes _____ and tension.
5. Children with a learning disability may have a short _____ .

Lesson 21

Gifted and Talented Children

The highlights of the lesson

This lesson intends to introduce gifted and talented children. The highlights of this lesson are:

1. Why we must not focus only on the outstanding talent of gifted children.
2. The hallmarks and qualities that help you to discover gifted or talented children.

Gifted children grow as whole human beings. It is a mistake for people to focus only on the brilliant mind or outstanding talents of gifted children. If you, as a caregiver, learn only about the extraordinary things gifted children can do, you miss learning about the parts of them that are just like most people. Gifted children sometimes get the idea they are loved only because they are smart or talented. Sometimes friends, family, and caregivers miss opportunities to tell them they are loved because they like to run, swim, play, work, or laugh and are just like everyone else.

When gifted children are given extra attention because they are smarter and more creative than other children, they feel different. Sometimes gifted children who do not like to feel different will try to make their "specialness" less noticeable. This also is called compensation. While compensating for a handicap can be helpful for a disabled child, it can be damaging to a gifted child. Compensation

often causes gifted children to deny their abilities and talents in order to "fit in" better with children of their own age. Denying parts of themselves can lead to frustration, boredom, and low self-esteem.

It used to be that only children with high IQ's were considered gifted. Today, other talents are also recognized as hallmarks of gifted children. Children are seen to be gifted in such areas as leadership, physical events, arts, and mechanics. It is estimated that there are millions of gifted children in the world and they are talented in many different ways.

Here are some clues to watch for that may lead you, as a caregiver, to discover a gifted or talented child.

- Early physical and intellectual development: a child who walks, talks, or learns to fix a radio at a young age may be gifted.
- Curiosity and interest in things happening in the world may signal a gifted child. Gifted children often have a strong desire to be informed and taught.
- Interest in books - especially reference books like dictionaries, encyclopedias, atlases, and biographies - may be a signal of a high IQ, a talent for writing or another kind of intellectual gift.
- Gifted children often show leadership qualities and are very responsible for their age.
- Gifted children do reading, math problems, writing, and speaking with ease.

Gifted children are still children. They need to be loved for who they are and encouraged to develop their talents and intellectual skills. You can encourage them by providing books, hobbies, trips to museums or art galleries, and by including them in conversations.

Gifted children need to have their questions answered honestly and often in detail.

As a teacher, you can help gifted children grow up with confidence by accepting them for who they are and treating them as you would treat any other child or friend.

1. COMPREHENSION EXERCISES

A. Choose the correct answer A, B, C or D.

1. If you focus only on the outstanding abilities of gifted children, _____ .
   A. you will forget to see them as a normal person like every one else
   B. you will not encourage them to play ,work, and swim like other children
   C. you will not give them extra attention
   D. they will never understand that they are different from the others

2. According to the passage compensation is damaging to _____.
   A. handicap children
   B. talented children
   C. disabled children
   D. every child

3. Today the concept of gifted children includes _____ .
   A. children with high IQ's
   B. children without any disabilities
   C. children with high IQ's and those who are talented in any other way as well
   D. children who can describe different subjects in detail

4. To help gifted children grow up with confidence, _____ .
   A. we must treat them like other children
   B. we must place emphasis on their special talents
   C. we must try to help them make their "specialness" less noticeable
   D. teach them how to compensate

B. According to the passage, which of the following statements are 'True' (T) and which are 'False' (F)? Insert 'T' or 'F', whichever is correct, in the boxes at the right.

1. We should not let talented and gifted children feel that they are different from the others. ☐

2. Giving extra attention to the gifted children may cause them to deny their abilities and talents in order to be like children of their own age. ☐

3. Early physical and mental development may be a signal to discover gifted children. ☐

4. The curiosity in gifted children is not much different from that of normal children. ☐

Word Study

boredom the state of being bored,
Boredom is one of the main reasons kids get into trouble.

brilliant very good; fantastic, wonderful,
Joanna came up with a **brilliant** idea for a new book.

caregiver someone who takes care of a child or sick person
We need to increase the continuity of relationships between adult **caregivers** and children.

clue something that serves to guide or direct in the solution of a problem or mystery

Scientists have discovered a **clue** to the puzzle of why our cells get old and die.

compensation make up for shortcomings , adjust for
Linda's aggressiveness is just a **compensation** for her feelings of insecurity.

curiosity the desire to know about something
A good teacher must try to excite natural **curiosity** in children.

2. VOCABULARY EXERCISES

A. Match each word in Column A with a word or an explanation in Column B. There are more words in Column B than you need.

A.	B.
1. talent	A. inquisitiveness
2. brilliant	B. indication, sign
3. hobby	C. a typical quality of a person or thing, a distinctive characteristic
4. curiosity	D. a natural ability to do something well
5. hallmark	E. excellent
6. clue	F. spare-time activity
	G. to make somebody healthy again

B. Complete the following sentences, using the correct form of the following words.

talent, hobby, boredom, brilliant, creative

1. Michael Smith gave a _____ speech on the subject of preschool education.
2. Gifted children are more _____ and talented than other children.

3. Stamp collecting has been a _____ of mine ever since I was a child.
4. She could no longer stand the _____ of having nothing to do.
5. He has a lot of _____, and his work is fresh and interesting.

Lesson 22

Attention-Deficit Hyperactivity Disorder (ADHD)

The highlights of the lesson

The lesson introduces special children with ADHD. The significant points of this lesson are:

1. What is ADHD.
2. Some strategies and approaches required for teaching ADHD children.

Attention-Deficit Hyperactivity Disorder (**ADHD** or **AD/HD**) is a neurobehavioral[1] developmental disorder.[2] It is primarily characterized by "the co-existence of attention problems and hyperactivity, with each behavior occurring infrequently alone" and symptoms starting before seven years of age.[3]

A significant number of children suffer from ADHD globally. Despite this however, there is a very real lack of awareness or understanding on the part of schools and teachers. This means that children with ADHD are treated unfairly. It is not uncommon to hear teachers asking ways in teaching a student with ADHD, teaching techniques for ADHD or even the question on how to teach a ADHD child. Too often children with ADHD are being considered as

---

Submitted by Kim Thompson

disruptive or low achievers, however with some guidance and hard work, a child with ADHD can achieve just as much as any other child. Teaching a ADHD child may be difficult and may require a different approach than with other children, but such measures are by no means impossible. It requires commitment and patience from both the teacher and the child.

There are a few strategies that you, as a teacher, can use to make both your life and your student's life a little easier:

Consult the experts: parents, previous teachers, specialists, guidance counselors, psychologists.

Promote high self-esteem: be friendly, respect opinions, provide immediate feedback, and give reinforcement for any improvement.

Establish control: be consistent, follow definite rules, discipline offences immediately, offer explanations for what rule was violated and be willing to listen to their side of the story.

Schedule activities to accommodate the student's fluctuating energy levels, send the student on errands if he or she has energy to burn.

Maximize academic improvement: allow for flexibility in the amount of time needed to complete a project, offer alternatives to writing (ex. typing), establish small tasks leading up to the completed project.

Grab the student's attention: eye contact, give short and easy-to-understand instructions, insist that students repeat back the information, use non-verbal cues to quiet the students such as raising a hand or blinking the lights, give private cues when a student is off-task such as a hand on their shoulder.

Offer explanations for what rule was violated and be willing to listen to their side of the story.

Utilize group work: encourage problem solving, teamwork, and

coope...

Reward success: use stickers, post points on a chart, shake hands, smile, and use verbal praise.

In general you need to encourage rather than criticize, tell them what you want them to do (not just what *not* to do), refrain from accusations, catch the child exhibiting positive behavior, shape behavior through praise, move closer to the ADHD child when you want his/her attention, and have a sense of humor.

1. COMPREHENSION EXERCISES

A. Choose the correct answer A, B, C or D.

1. Which of the following best describes ADHD?
   A. It is a psychological disorder.
   B. It is attention deficiency along with hyperactivity disorder.
   C. It is only a neurobehavioral disorder.
   D. It is a developmental and psychological disorder that starts after seven years of age.

2. Children with ADHD are not treated fairly because _____.
   A. their parents do not believe their deficiency
   B. these children are not low achievers
   C. teachers think of them as disruptive children
   D. they achieve as much as other children

3. Teaching a ADHD child _____ .
   A. is not hard
   B. is impossible
   C. does not require a different method
   D. requires awareness, commitment and patience

4. According to the passage:
   A. If an ADHD child achieves well, reward him for his/her progress.
   B. Do not give an ADHD child extra time to complete the project.

   C. Treat him as equally as you treat normal children, be fair.
   D. To make an ADHD child focus, give him a break between two tasks.

B. According to the passage, which of the following statements are 'True' (T) and which are 'False' (F)? Insert 'T' or 'F', whichever is correct, in the boxes at the right.

1. ADHD children are much more energetic than other children are. ☐
2. Attract and sustain the ADHD child's attention by speaking loudly. ☐
3. You may overload the ADHD child with many different tasks. ☐
4. Be firm and serious with ADHD children, otherwise you will not be able to control them. ☐

Word Study

counselor a person who gives counsel; an advisor

One of the strategies that you can use is to seek advice from a **counselor.**

cue a signal, such as a word or action, used to prompt another event in a performance

Non verbal **cues** are useful to quiet ADHD children.

disruptive causing problems and preventing something from continuing in its usual way

Stephen's teacher said he was often **disruptive** in class.

errand a short journey in order to do something for someone

Send the student **errands** in order to lower his/ her energy level.

hyperactivity an abnormally high level of activity or excitement shown by a person, especially a child, that interferes with the ability to concentrate or interact with others

A good night's sleep could reduce **hyperactivity** and bad behaviour among children.

praise to say that you admire and approve of someone or something

Jane was **praised** by her teacher.

reinforcement the act or process of reinforcing, the increasing of force or strength

We need to give students plenty of positive **reinforcement**.

symptom a sign or indication of something

ADHD's **symptoms** starts before seven years of age.

2. VOCABULARY EXERCISES

A. Match each word in Column A with a word or an explanation in Column B. There are more words in Column B than you need.

A.	B.
1. grab	A. the ability to understand and enjoy things that are funny
2. to feel pain	B. cue
3. sense of hummer	C. the capacity for calmly enduring pain, trying situation
4. praise	D. get attention
5. signal	E. the ability to change or easily to suit a different situation
6. patience	F. admire
7. flexibility	G. lacking any reason or purpose
	H. suffer

B. Complete the following sentences, using the correct form of the following words.

consult, utilize, hyperactivity, commitment, feedback, reinforcement

1. The teachers were unable to _____ the new computers.
2. Try to give each student some _____ on the task.
3. If this symptom persists _____ an advisor without delay.
4. Be friendly to the children with ADHD and give positive _____ for their improvement.
5. Working with special children requires _____ and patience.
6. The doctor prescribed some medicine for his_____ disorder.

Key Words

A

abacus n (16) چرتکه، وسیله‌ای قدیمی برای حساب کردن

abstract adj (15) انتزاعی، غیرملموس، مجرد

academic area n (14) حیطهٔ آکادمیک - قلمرو آموزشی (علمی) که حد و مرز مشخص دارد

academic skills n (2) مهارت‌های علمی

administrative organization n (12) سازمان اداری، تشکیلات اداری

adult standards n (18) معیارهای بزرگسالان

advisory board n (9) هیات مشاوره‌ای، گروه مشاوره

aide n (3) دستیار- کمک

aimless lines n (18) خطوط بی هدف

aptitude n (16) قابلیت، استعداد و توانایی

arithmetic n (16) حساب

art media n (10) رسانه های هنری

artful teacher n (16) معلم خبره

artistic endeavor n (11) تلاش هنرمندانه

Association for Childhood Education International (12) انجمن بین‌المللی آموزش پیش‌دبستانی (دوران کودکی)

atmosphere of love n (10) جو (فضای) محبت‌آمیز

attention deficit n (21) کم توجهی -کاستی توجه

attention span n (3) طیف توجه، میدان تمرکز

B

background n (16) پیشینه - پیش آگاهی، سابقه، زمینه

basic repertoire n (18) معلومات پایه، معلومات اولیه

C

caregiver n (21) مراقب، پرستار

chart n (16) تابلو

child- centered n (6) کودک محور

choral group n (16) گروه کر، گروه آوازخوانان

cognitive psychology n (8) روانشناسی شناخت

college training n (3) تحصیلات دانشگاهی

community n (13) جامعه

competent adj (10) ماهر، توانا - بااستعداد

concept n (10) مفهوم

conceptual property n (10) حیطهٔ ادراکی خصیصه مفهومی (ویژگی کلیدی که با وجود آن یک مفهوم خاص شکل می‌گیرد)

concrete adj (15) واقعی، ملموس

consultation n (13) مشاوره -مشورت، همفکری

context n (11) بافتار- زمینه، بوم

cooperation n (13) همکاری، تشریک مساعی

cooperative school/parent cooperative/ nursery school n (2) مهدکودکی که با مشارکت اولیا اداره می‌شود

craft n (14) کاردستی

creative activity n (11) فعالیت خلاق

creative expression n (11) بیان خلاق، نمود خلاق

creativity n (19) خلاقیت- آفرینندگی

curriculum n (14) برنامه‌ریزی درسی - برنامه درسی، مواد آموزشی

D

day- care center n (2) مرکز مراقبت روزانه

demonstration n (14) به نمایش گذاشتن، عملاً نشان دادن

deprived child n (4) کودک محروم

development n (1) رشد

disabled children n (20) کودکان ناتوان (معلول)

dramatize v (16) به شکل نمایشنامه در آوردن

E

early childhood education (1) آموزش دوران اولیهٔ کودکی، آموزش خردسالان

early educational experience (1) تجربهٔ آموزشی اولیه (خردسالان)

economic conditions n (1) اوضاع یا شرایط اقتصادی

educational "play" materials n (5) مواد بازی آموزشی، وسایل بازی آموزشی

educational benefit n (17) بهره یا فایدهٔ آموزشی

educational group n (4) گروه آموزشی

educational technique n (10) تکنیک آموزشی

educational trip n (3) گردش علمی

educator n (9) آموزش‌دهنده، متخصص تعلیم و تربیت

effective learning n (14) یادگیری مؤثر یا سودمند

egocentric adj (6) خود محور

elementary education n (1) آموزش ابتدایی

emotion n (15) هیجان

empathy n (10) همدلی

encouragement n (11) تشویق، ترغیب

enthusiasm n (12) اشتیاق، شور و شوق، هیجان

epistemology n (6) معرف شناسی

exclusion n (4) انزوا، محرومیت

experiment v (16) تجربه کردن، آزمایش کردن

experimentation n (4) تجربیات علمی

expert n (13) متخصص، فرد صاحب نظر

expressive creativity n (9) خلاقیت نمایان

F

family day care n (2) مراقبت‌های خانوادگی

family orientation n (4) راهنمایی خانواده

feedback n (12) پسخوراند، عکس‌العمل گیرنده و آموزش نسبت به فرایند آموزشی

field n (1) رشته، زمینه

field trip n (17) گردش علمی

formal learning n (4) آموزش رسمی

foundation n (16) پایه، اساس، بن

G

genetic epistemology n (6) معرفت شناسی ژنتیکی

gifted children n (21) کودکان با استعداد، سرآمد

greenhouse n (17) گلخانه

group program n (1) برنامهٔ گروهی

growth n (2) رشد

guard against v (16) جبهه گیری کردن

H

humane adj (10) بشر دوست، دارای عواطف انسانی دوستانه

hyperactivity disorder n (22) اختلال فزونکاری، اختلال بیش فعالی

hypothesis n (17) فرضیه

I

idiom n (15) شیوه، اسلوب ویژه

illustration n (16) مثال، تصویر

imaginative adj (11) تخیلی، برخورداری از تخیل قوی

in due time adv ph (16) ناسب، در وقت تعیین شده در موقع

individual n, adj (6) فرد، فردی

indoor activities n (3) فعالیت‌های فضای بسته

informal learning n (4) آموزش غیررسمی

intellectual development n (8) رشد عقلی

interdependent relationship n (17) روابط به هم وابسته، روابط مرتبط به یگدیگر

interference n (7) تداخل

J

joint play n (15) بازی دسته جمعی، بازی گروهی

k

kindergarten n (14) کودکستان

L
language arts n (14) فن و هنر زبان و گفتار، هنرهای کلامی و زبانی؛ مهارت‌های مربوط به کلام و زبان مانند شعر خوانی، داستان گویی، نمایش و اپرا
learning n (9) یادگیری
learning disability (20) ناتوانی در یادگیری
learning experience n (11) تجربهٔ یادگیری
lecture hall n (3) تالار یا سالن سخنرانی
level n (13) سطح، پایه
life span n (10) دورهٔ زندگی
literary production n (16) آفرینش ادبی
living things n (17) موجودات زنده

M
major goal n (2) هدف عمده
manual dexterity n (18) مهارت در به‌کار بردن دست
mathematical implications n (16) مفاهیم و نکته‌های پوشیده و ناپیدای ریاضی
mathematical learning n (16) یادگیری‌های ریاضی
mathematics n (16) ریاضیات (به‌عنوان یک علم)
memory n (16) حافظه
mentally retarded n (6) عقب‌مانده ذهنی
method of operation n (13) روش کار
mind- molding n (4) شکل‌گیری ذهنی
mobile n (18) نوعی اسباب بازی متحرک که برای تقویت چشمان نوزادان بالای تخت نوزاد می شود یا کارهای دستی که اجزایش متحرک هستند و در جریان هوا حرکت می کنند
mold v (18) شکل دادن به خمیر مجسمه
motive n (6) انگیزه
motor level n (15) در حد حرکتی
muscle coordination n (3) رشد موزون عضلانی

N
National Association for Education of Young Children (12) (انجمن ملی آموزش کودکان خردسال پیش‌دبستانی)
National Council for Accreditation of Teacher Education (1) شورای ملی ارزشیابی تربیت معلم
national origin n (18) منشأ نژادی
natural and science activities n (17) فعالیت‌های مربوط به طبیعت، علوم طبیعی
natural world n (17) دنیای طبیعی، طبیعت
nature n (6) ذات، خمیرمایه
neurological disorder n (20) اختلال عصبی
nonverbal adj (15) غیر کلامی
normal n (6) بهنجار
normal ingredient n (14) عنصر عمومی یا عناصری که معمولاً در یک برنامهٔ درسی حضور دارند
numerical concepts n (14) مفاهیم عددی، مفاهیم ریاضی
nursery n (2) مهدکودک
nursery school n (3) مهد کودک

O
objective n (12) هدف
objective measurement n (18) ارزیابی و اندازه‌گیری عینی
obliged adj (15) ناگزیر، مجبور
operant conditioning n (5) شرطی شدن کنش‌گر، شرطی شدن عامل
optimum rate n (10) سرعت مطلوب
orientation program n (13) برنامهٔ توجیهی، برنامهٔ معارفه، برنامهٔ جهت‌دهنده
orthopedic disorder n (20) اختلال استخوان
outdoor activities n (3) فعالیت‌های فضای باز
outdoor play space n (3) فضای بازی آزاد

P
parent meeting n (9) جلسهٔ ملاقات با اولیا(جلسه اولیا و مربیان)
pastime n (15) گذران وقت، سرگرمی
peripheral adj (15) جانبی، فرعی، حاشیه‌ای
physical environment n (10) محیط مادی (فیزیکی)

physically adv (15) فیزیکی، جسمی
pictorial stage n (18) مرحلهٔ تصویری
Plato n (5) افلاطون
play n (15) بازی
pleasurable responsibility n (17) مسئولیت خوشایند، وظیفهٔ دلچسب
prekindergarten n (2) دورهٔ آماده‌سازی کودک برای رفتن به کودکستان
preoperational adj (6) پیش عملیاتی
prerequisite n (4) پیش نیاز
preschool center n (4) مرکز پیش دبستانی
preschool education n (5) آموزش پیش دبستانی
preschoolers n (3) کودکان پیش دبستانی
primary grades n (2) کلاسهای ابتدایی
privileged child n (4) کودک مرفه
process of art n (18) فرآیند و مراحل مختلف کار خلاق و هنری، فرآیند هنر
profession n (9) حرفه، شغل
professional development n (12) رشد حرفه‌ای، تعالی حرفه‌ای، پیشرفت حرفه‌ای
psychiatry n (6) روان پزشکی
psychological implications n (11) تلویحات روان‌شناسانه، برداشت‌های روان‌شناختی
pupil n (10) شاگرد

Q
quantitative concept n (16) مفهوم کمی، مفهوم مقداری
quantitative understanding n (16) درک کمّی، درک مقداری

R
reality n (15) واقعیت
reciprocal adj (10) دو جانبه
recreational program n (1) برنامهٔ تفریحی
resources n (13) منابع
retardation n (4) عقب‌ماندگی، کندی
rhymes (nursery rhymes) n (16) شعرهای مهد کودک

S
school system n (2) سیستم مدرسه
science n (14) علم
scribbling n (16) خط خطی کردن
sculpture n (18) هنر مجسمه‌سازی، مجسمه
self-development n (6) رشد خویشتن
self directed adj (11) خود فرمان
sensory disability n (20) ناتوانی حسی
sensory experience n (6) تجربه حسی
sensory level n (15) درحد حسی، در سطح حواس پنجگان
social force n (1) فشار اجتماعی
social skill n (1) مهارت اجتماعی
socioeconomic background n (18) پیشنه یا سابقهٔ اقتصادی- اجتماعی
socio-genesis n (6) پدیدآیی اجتماعی
special services n (13) خدمات ویژه
spot v (16) نشان کردن، علامت‌گذاری کردن، مشخص کردن
staff members n (9) کارمندان
stages of intellectual development n (5) مراحل رشد عقلی، مراحل رشد ذهنی
stereotype n (11) کلیشه‌ای
stereotyped teacher n (11) معلم کلیشه‌ای، معلم تصور قالبی
stimuli (pl) n (16) محرک‌ها
stimulus (singular) n (16) محرک
structure n (11) ساختار

T
talented children n (21) کودکان با قریحه و استعداد
team activity n (9) کارگروهی، کار جمعی
tentative conclusions n (16) نتایج آزمایشی
textures n (18) نسوج
theme n (16) موضوع، مضمون، تم
thinker n (5) متفکر
traditional schooling n (4) موزش رسمی (سنتی)

tuned-in adj (16) هماهنگ، میزان

U
Utilitarian purpose n (15) قصد فایده رساندن، قصد سودمندی

V
verbal adj (15) کلامی
